► THE MICROPHONE COMPANY

Why digital signal processing?

With the development of the first digital recording equipment, the digitization of audio data began many years ago, at the end of the signal processing chain. By now, almost all audio signal processing components are available in digital form.

It is well-known that digital signals provide the necessary conditions for mathematically precise calculation and pro-

cessing, allowing signals to be modified, copied, transmitted and stored as desired, with no loss of quality.

In contrast, analog signal processing is characterized by limited precision, error accumulation, a lack of redundant signal information, and no possibility to include error correction procedures. In the analog signal transmission chain, every processing step is thus associated with a deterioration of signal quality. This results in a progressive decrease in dynamic range, due to the introduction of noise voltages and nonlinear distortion.

Moreover, digital processing permits the performance of functions that are difficult or impossible to implement by means of analog signal processing. This is particularly the case with functions that require intermediate data storage.

A microphone technology milestone

With the Solution-D digital microphone system, Neumann has succeeded in bringing the dynamic range and signal fidelity of the best analog studio microphones into the digital domain, thus making possible an entirely digital signal chain for audio production.

Thanks to optimized A/D conversion, especially developed synchronization technology, and the capability of controlling standard microphone parameters and various integrated signal processing functions remotely, Solution-D meets the most demanding requirements of professional audio production. The fundamental principle of the technology permits recordings to be made with no „bottlenecks“ in the signal chain.

An extremely fast peak limiter integrated into the microphone provides constant protection from overloading. The Neumann A/D converter, which is likewise located in the microphone, eliminates the necessity of tedious experimentation with external converters and preamps. The Neumann sound, with optimal quality, is therefore captured directly on the hard drive. Users can rely on this, and thus have more time for the essentials.

Components and interfaces

The power supply, remote control, synchronization, and signal and data transmission of the digital microphones conform to the AES42 standard. Neumann made a decisive contribution to the development of this standard, which supplies the necessary preconditions for the implementation of digital microphone technology.

A Solution-D digital microphone system consists of the following components: One or more digital microphones, a Digital Microphone Interface (DMI) and the Remote Control Software (RCS), which facilitates the operation and permits

TRUE NEUMANN SOUND:

The legendary Neumann sound in the digital realm. Pure Neumann capsule sound.

The System

Description

the remote control of the microphones. A PC or Mac can serve as the control computer, which of course can also be used simultaneously as Didital Audio Workstation for recording. A DMI permits connection to all subsequent devices that have an AES/EBU interface.

As an alternative to a DMI, a „Connection Kit“ can be used to connect Solution-D microphones to the AES/EBU or S/PDIF interface of a recording system. However, if a Connection Kit is used, it is not possible to control the microphone functions remotely. Thus a control computer is not required. In this case, if it is necessary to synchronize several microphones, a sample rate converter must be used.

All of the possible Solution-D system configurations are illustrated on the following pages.

Starter Sets, containing a microphone and a Connection Kit, provide an economically attractive entry to the world of digital microphones. If users later wish to take advantage of additional adjustable parameters and remotely controlled functions, the system can be expanded at any time through the acquisition of a separate DMI.

Remote control of standard microphone parameters

The DMI digital microphone interfaces permits familiar microphone settings such as the directional characteristic, pre-attenuation and low-cut filter to be controlled remotely and saved. Changing the settings of microphone parameters is greatly simplified, which makes it possible for settings to be tested rapidly from the monitoring position, in order to optimize the sound quality. All of the settings can be saved together with any desired additional information, thus eliminating the necessity of keeping a hand-written log of the recording procedure.

Integrated digital audio signal processing

An A/D converter, developed and patented by Neumann, receives the signal directly from the capsule, and is optimized for the specific signal and impedance parameters of the capsule. Level matching that may be desired for subsequent equipment takes place in the digital domain, in the microphone. Analog components such as preamplifiers and A/D converters are thus no longer required, resulting in considerable cost savings.

The special A/D converter technology makes it possible to have the complete dynamic range of the microphone capsule available in the digital domain, with no restrictions. Setting gain levels is therefore no longer critical.

A particularly significant feature is the peak limiter function.

Located for the first time in the most effective position, at the signal source, it reduces transient peaks as the level reaches 0 dBFS, when distortion would normally be inevitable.

Analog microphones require extensive headroom in the subsequent signal path to handle such signal peaks, which are short but have a large amplitude. Independently of the peak limiter, a compressor/limiter can also be activated, permitting detailed adjustment via the corresponding parameters.

In addition, functions such as mute and phase reverse are also integrated into the microphone. Visual commands such as „On air“ are implemented by means of remotely controlled LEDs in the D-01 microphone. Acoustic commands in the form of various test signals can be used to facilitate line checks.

The firmware of all the digital microphones can be updated via uploading at any time.

Data transmitted by the microphone

Information transmitted by the microphone includes the name of the manufacturer, the model and serial number, the software version installed in the microphone, and the remotely controllable functions that are supported by the microphone. Status indicators such as „ready for operation“ and specific warning functions are also transmitted.

A/D conversion

Despite continuing improvements, integrated circuits available on the market still constitute a limiting factor in the conversion of audio data from analog to digital form. The best currently available delta-sigma A/D converters typically achieve a dynamic range of 115 dB to 120 dB, A-weighted, with a word length of 24 bits.

In comparison, a high-quality analog condenser microphone has a dynamic range of up to 130 dB. A/D conversion with a considerably better performance is therefore required, in order to prevent the addition of noise to the signal. At the same time, this process must be optimally adapted to the signal levels and source impedance found in the microphone.

If the A/D conversion is carried out only after the signal reaches the mixing console or other equipment, this is usually associated with loss of signal quality, since the conversion takes place only after the gain levels have been set. Headroom aspects and noise contributed by the microphone preamplifier and A/D converter thus affect the dynamic range.

Consequently, the development goal was to achieve high-quality digitization of the capsule signal directly in the microphone, so that level matching and other processing steps could be carried out in the digital realm. This is the only way of maintaining the full quality of the microphone signal.

TRUE TO THE ORIGINAL:

The satisfaction of recording the uncolored original, with no „bottlenecks“ between the capsule and the recording system.

TRUE CONVERSION:

The guarantee of having one of the best A/D converters available.

NEUMANN.BERLIN

► THE MICROPHONE COMPANY

Synchronization

The AES42 standard defines the following two methods of synchronizing the microphone with the receiver (e.g. a mixing console or a DMI digital microphone interface).

Mode 1: The microphone operates asynchronously, using the sampling rate of its internal quartz oscillator. In this case, a sample rate converter is required at the receiver. This mode should be used only if mode 2 synchronization is not possible, since conventional sample rate converters often impair the dynamic range, and increase the latency time.

Mode 2: The microphone is synchronized with a master word clock. This can be either an external word clock or the internal word clock of the DMI. In this case a frequency/phase comparison with the master word clock is carried out in the AES42 receiver (DMI). A control signal is generated that is transmitted to the microphone via the remote control data stream, controlling the frequency of the quartz oscillator in the microphone.

Via the BNC output of the DMI, the internal word clock generator can be used to synchronize additional DMIs and subsequent processing equipment, such as a mixing console.

The microphones

The signal generated by the capsule is converted directly into a digital signal. The result is a digital output signal with 24 bits and, for example, a dynamic range of 130 dB (A-weighted) in the case of the D-01.

If required, the digital signal processing (DSP) functions integrated into the microphone can be configured and controlled remotely via the DMI digital microphone interface and the RCS remote control software. These functions include gain setting, changing the directional characteristic in the case of the D-01, pre-attenuation, a low-cut filter, a compressor/limiter with an additional de-esser function, and a peak limiter. Here in particular the digital approach can provide a significant advantage. The peak limiter, which receives the output signal almost directly from the capsule, functions as a completely automatic „safety valve“, permitting the safe utilization of the entire available dynamic range even in stressful recording situations.

External components that were previously required, such as analog preamplifiers and A/D converters, are no longer necessary.

To permit clear identification, the microphones send information such as the name of the manufacturer, model, serial number and currently installed software version to the receiver.

The microphones are equipped with three-pin XLR connectors.

A bidirectional signal conforming to the AES42 standard is transmitted, containing the balanced digital microphone output signal, the phantom power supply, and a remote control data stream, which includes a signal for synchronizing the microphones with a master clock.

The D-01 large-diaphragm digital microphone

Its 15 different remotely controlled directional characteristics and numerous additional features permit the D-01 to be optimally adapted to almost any recording situation. These comprehensive features demonstrate what can be achieved with digital microphone technology. The D-01 has a newly developed capsule, and is valued by users particularly for its hitherto unknown transparency and fidelity to detail.

The TLM 103 D large-diaphragm digital microphone

For many years the analog version of the TLM 103 D has played an important role for ambitious home recording and project studios. This microphone has made the Neumann sound available to a broad spectrum of demanding audio engineers and musicians. The TLM 103 D provides all of the sound features of its analog counterpart, in addition to the advantages of digital circuit technology described above.

The KM D miniature digital microphones

The KM D microphones are the digital counterparts of the well-known, successful 180 miniature microphone series. In the analog realm, the KM 184 in particular is regarded as a standard for miniature condenser microphones, and is one of the best-selling of all Neumann microphones.

Eight different capsule characteristics are provided. The KM D microphones have a modular design, so that the KM D output stage can be combined with different capsules. All capsule heads can also be used with the analog KM A output stage.

The S/PDIF and AES/EBU Connection Kits

In addition to the DMI digital microphone interface, Neumann also provides „Connection Kits“ at an attractive price, to permit the simple connection of individual microphones to the widely used S/PDIF and AES/EBU interfaces. This allows numerous users to enjoy easy access to „Neumann sound direct to disk“, without the extensive functionality of a comprehensive DMI. Power is provided by an included plug-in power supply unit.

TRUE HANDLING SAFETY:
Anti-clipping processing
ensures handling safety,
and reduces stress.

The System

Description

Of course it is possible to upgrade to a DMI at any time, in order to take advantage of the additional configuration capabilities and DSP functions.

Attractive Starter Sets for an economical entry into the field of digital microphone technology

Starter Sets provide a simple and economically very attractive introduction to digital microphone technology. These include a KM 184 D or TLM 103 D microphone and a Connection Kit for an S/PDIF or AES/EBU connection. For entry-level, budget-conscious users who are planning for future recording equipment, an interesting aspect is that an A/D converter is already integrated into the digital Neumann system and, in addition, a preamplifier is no longer required. Moreover, the difficulty of selecting compatible equipment is avoided, since all of the components are provided by a single source. It is thus ensured that the Neumann microphone sound can be captured directly on a digital recording medium with no coloration.

The DMI-2 digital microphone interface

The 2-channel DMI-2 digital microphone interface provides powering and remote control of Solution-D microphones, and outputs their audio data in AES/EBU format.

Microphones of other manufacturers that are compatible with the AES42 standard (e.g. the Sennheiser MKH 8000 with MZD 8000) can of course also be connected to the digital microphone interface, if they can be synchronized.

The Interface is operated via the Neumann RCS remote control software, which is installed on a desktop or laptop computer. The computer is connected to the DMI via a USB port and a USB to RS 485 interface converter. If a large number of microphones is used, several DMIs can be cascaded. In this case, each digital microphone interface can be addressed individually.

In addition to a word clock input and output, the DMIs also have an internal word clock generator. If no master word clock signal (e.g. from a mixing console) is present at the input, the DMI internal word clock is used automatically to synchronize the microphone channels, and the signal is switched to the word clock output.

External commands such as „On Air“ (red light) can be controlled via a 9-pin user port.

Overview of the most important functions:

- AES42 to EBU conversion
- Powering, remote control and synchronization of the microphones without a sample rate converter (AES42, mode 2*)

- Automatic word clock or AES11 synchronization
- All sample rates, from 44.1 kHz to 192 kHz
- Complete control and storage of the settings via Mac or PC

* Explanation Mode 2:

The DMI performs a frequency/phase comparison between the word clock signal recovered from the mic signal, and the word clock of the DMI. From the phase deviation thus determined, the DMI calculates a control signal which is transmitted via the remote control data stream to the mic, where it controls the frequency of the internal quartz oscillator.

The DMI-8 digital microphone interface

The DMI-8, an eight-channel version of the digital microphone interface is considerably simplifying the setup for multichannel applications.

In addition to the proven functions of the two-channel DMI-2 the DMI-8 also offers the following features:

- The capability of cascading up to 128 channels
- Level meter and gain setting on the front panel, operable even without a computer
- D-sub 25 outputs with Tascam® and Yamaha® pin assignments
- Optical ADAT® interface
- Open architecture for later connection to other multichannel interfaces and audio networks, such as Ether Sound® and MADI

The RCS remote control software

All parameters are displayed on the screen, and can be changed at any time. During production, the audio engineer can monitor the operating status and parameters of all of the connected microphones and, if necessary, can change the settings quickly and easily.

The parameters displayed include the directional characteristic, pre-attenuation, low-cut filter, gain, various microphone status indicators, command indicators, and mute and phase reverse functions. Signal levels and the operation of the compressor or limiter can also be monitored on the screen.

Information transmitted by the microphone, such as the name of the manufacturer, model and serial number, is also displayed for clear identification of the connected microphones. Moreover, it is possible to input additional information such as the name of the sound source. Settings for the complete microphone setup can of course be stored and retrieved as required.

TRUE TIME SAVINGS:

Reduced time requirements and personnel costs, particularly due to faster post production processing.

TRUE ECONOMY:

Lower investment costs, since separate A/D converters and preamps are no longer needed. This also means space and weight savings (e.g. in the OB van).

Application Hints

D-01

- Universally applicable, and particularly suitable for applications where maximum resolution and transparency are desired.

KK 120 + KM D

- MS-Stereo microphone, in combination with the KM 184 D
- Two crossed KK 120s in Blumlein technique
- Inconspicuous spot microphone with optimum attenuation of lateral sound sources
- Single microphone for two speakers facing each other

KK 131 + KM D

- For close miking of instruments when there is no need to attenuate extraneous noise, and in a balanced acoustic environment to record acoustic guitar, wind instruments, strings, percussion, and drums
- Flat frequency response for close miking, spot mic

KK 133 + KM D

- Its special acoustic properties make this an ideal mic for most classical recordings
- Main mic, especially for capturing room acoustics
- A superb AB stereo pair for perfect balance of direct and reverberant sound
- Decca tree, setup with three microphones
- Spot mic for piano, wind instruments, organ, choir

KK 143 + KM D

- Polar response characteristic acts more like an omni. Therefore, it is an ideal tool to record larger instrument ensembles
- As AB stereo pair, especially in rooms with less than ideal acoustics
- As spot mic for strings, wind instruments, percussion, and Leslie speakers
- Acts very neutral when used close up to bass instruments, such as double bass, bass amps, guitar amps

KK 145 + KM D

- It naturally compensates for proximity effect
- Very neutral tonal balance during close miking of speech, as in TV, movie and video, PA
- Acts very neutral when used close up to bass instruments, such as double bass, bass amps, guitar amps, leslie speakers, toms

KK 183 + KM D = KM 183 D

- For close miking of instruments when there is no need to attenuate extraneous noise, and in a balanced acoustic environment to record acoustic guitar, wind instruments, strings, percussion, drums
- Ideal as AB stereo pair because of the flat frequency response in the diffuse sound field
- Main mic, especially for capturing room acoustics
- For stereo recordings with a baffle plate
- Spot mic for piano, wind instruments, organ, choir

KK 184 + KM D = KM 184 D

- For universal use, especially for recording situations when it is necessary to attenuate off-axis sound (mainly from the rear) from other nearby instruments.
- As XY and ORTF stereo pair
- Broadcasting mic for announcers
- Spot mic and overhead
- Close miking of strings, wind instruments, percussion, piano, Leslie speakers and guitar amps

KK 185 + KM D = KM 185 D

- Especially for recording situations when it is necessary to attenuate off-axis (lateral and rear) sound from other nearby instruments.
- As XY stereo pair
- Overhead, toms
- In situations that are susceptible to acoustic feedback
- To attenuate unwanted sound of nearby instruments
- Recording of speech, as in TV, movie and video productions, PA systems
- Produces especially warm and bass supporting sound for artists who perform in proximity effect range

TLM 103 D

- A universal cardioid mic
- Vocalist recording
- Announcer's mic for broadcasting/voice over
- Due to minimal self-noise: on-air mic for radio/broadcast, very low amplitude signals, radio drama, sampling, foley/sound effects
- Home recording and project studios
- Spot mic for wind instruments, strings, percussion, guitar amps, drum overhead

Technical Data

► General Specifications of the Solution-D microphones

Interface: AES42

Remote controlled functions:

- Polar pattern¹⁾
- Low-cut: flat, 40, 80, 160 Hz
- Pre-attenuation: 0, -6, -12, -18 dB
- Gain: 0...63 dB in 1 dB steps, clickless
- Testsignal: 1 kHz, pink noise, white noise
- Sampling rates: 44.1, 48, 88.2, 96, 176.4, 192 kHz
- Parametric compressor/limiter (incl. de-esser function)
- Independent peak limiter avoiding any clipping
- Switch functions: soft muting, phase reverse, signal lights
- Signal lights: red²⁾ and blue LEDs
- System functions, firmware download

A/D conversion: Neumann process (patented),
28-bit internal word length

Digital signal processing: Fixed-point,
variable internal word length 28 bits to 60 bits

Synchronization:

- Asynchronous operation (free-running, AES42 - Mode 1),
basic frequency accuracy: ± 25 ppm
- Synchronous operation (AES42 - Mode 2),
pulling range: Min. ± 100 ppm

Power supply (phantom power complying with AES42)

Output: XLR3M, 24 bits as per AES/EBU (AES3)

► D-01 Specifications

Acoustic transducer: K 07 large double-diaphragm capsule,
diameter 30 mm with protected internal electrodes
Directional characteristic: 15 remote controllable polar patterns,
from omni to cardioid to figure-8

Frequency response: 20 Hz to 20 kHz

Free-field sensitivity¹⁾²⁾: -44 dBFS

Equivalent noise level, CCIR³⁾: 19 dB

Equivalent noise level, A-weighted³⁾: 8 dB-A

Signal-to-noise ratio³⁾, CCIR³⁾: 75 dB

Signal-to-noise ratio³⁾, A-weighted³⁾: 86 dB

Maximum SPL at 0 dBFS: 138 dB SPL

Dynamic range, A-weighted³⁾: 130 dB

Supply voltage range: +6 V to +10.5 V

Current consumption: max. 220 mA

Weight: approx. 700 g, Diameter: 63.5 mm, Length: 185 mm

- Gain: 10 dB (variable with DMI-2)
- Compressor on, Attack time 100 ms, Release time 0.5 s, Threshold -10 dBFS, Ratio 2:1

Supply voltage range: +6 V to +10.5 V

Current consumption: max. 150 mA

Weight: approx. 460 g, Diameter: 60 mm, Length: 132 mm

► DMI-2 (Digital Microphone Interface) Specifications

2 channels, Inputs: XLR3F, AES 42

Outputs: XLR3M, AES/EBU, 24 bit

Control bus: RS 485 via RJ 45 jack. Second RJ 45 jack for cascading purposes (up to 4 DMI devices today, 16 devices in future). Connection to the computer's USB port via Neumann USB 485 interface converter (included).

User Port: 9-pin sub-D, 3 functions per channel

Synchronization: AES 42 - Mode 2 (PLL system using an external Word Clock and remote controlling the VCXO in the microphone, default mode), AES 42 - Mode 1, (asynchronous, needs a sample rate converter (SRC) at the receiver side).

Word clock input: BNC, 75 ohms.

Word clock output: BNC, 75 ohms, automatically set to the internal word clock master when no external word clock received. Selectable internal sampling rates: 44.1, 48, 88.2, 96, 176.4, 192 kHz.

External Word clock: 44.1, 48, 88.2, 96, 176.4, 192 kHz or AES 11 format.

Indicators: Data Valid (AES 42) and Sync Locked (Mode 2) for each channel, Power On and Ext. Word Clock.

Power supply: 90-240 V, 50/60 Hz.

Storage of the last microphone settings and reloading to the microphones after power on automatically without the need of the computer/RCS.

► DMI-2 (Digital Microphone Interface) Specifications

AES42 inputs: 8x XLR3F, Audio data in accordance with AES/EBU (AES3) data format, Digital phantom power (DPP), Remote control data

Outputs: 2x SUB-D 25, AES/EBU (AES3) data format, Yamaha® and Tascam® pinout, 1x Toslink, ADAT® format up to 48 kHz, 1x RJ 45, GN format up to 192 kHz, incl. power-out pin: approx. +15 VDC, max. 1 A, short-circuit-proof

Microphone synchronization: AES42 - Mode 2 (synchronous mode)

Microphone clock control via PLL

DMI-2 Synchronization: automatically to an external word clock or AES11 signal, if present, otherwise the internal word clock generator is activated.

Word clock (or AES11) input: BNC

- Vin: >100 mV at 75 ohms

Word clock (or AES11) output: BNC

- Vout: = Vin (external synchronization)

- Vout: approx. 1.5 V at 75 ohms (internal word clock generator)

Internal word clock generator: 44.1/48/88.2/96/176.4/192 kHz

Indicators: Power, Ext Word Clock, Valid, Level (microphone)

Control elements: 8x Channel Select, GAIN +/-

Control bus: 2 x RJ 45 ports; connection to computer USB port via the Neumann USB 485 interface converter; connected in parallel for the purpose of cascading, RS 485 with additional power-out pin (approx. +11.3 V, max. 500 mA)

Device address (ID): 0 to 15, adjustable via coding switch on the back of the device

User port: 9-pin sub-D, 1 switch function per channel (Mute and/or Light 1/Light 2 selectable)

Power supply: 90 V to 240 V; 50/60 Hz

► Features of the RCS (Remote Control Software)

Communication via USB port (Win 2000/98SE/ME/XP, Vista, MAC OS version 8.6...10 on PowerPC)

Up to 8 channels displayed simultaneously on the screen

Controllable functions: polar pattern, low-cut, pre-attenuation, gain, test signals, limiter/compressor/de-esser, peak limiter, phase reverse, mute, sampling rate, synchronization mode, signal lights...

Display: peak level meter, gain reduction meter for compressor/limiter/de-esser and peak limiter, microphone properties (manufacturer, model, serial number, hardware and software revision, internal latency time), DMI properties, status signals (overload, limiter active, data valid, sync locked, power on)

Saving/Loading of configurations

Individual channel labelling

Software update of Neumann microphones and DMI device

► Connection Kit S/PDIF (AES/EBU) Specifications

Connector: input XLR3F, output Cinch (XLR3M)

Weight: approx. 96 g (S/PDIF), approx. 130 g (AES/EBU)

Width: 32 mm, Height: 26 mm, Length: 105 mm

Power supply: 90-240 V, 50/60 Hz

For remote controlling functions you have to use the DMI-2

All data with respect to 0 dB pre-attenuation and 0 dB gain.

M 147 Tube

▶ **Tube Microphone**

www.neumann.com

NEUMANN.BERLIN

▶ THE MICROPHONE COMPANY

The M 147 Tube is a vacuum tube condenser microphone with cardioid characteristic. At the heart of this microphone is the K 47/49 dual diaphragm capsule, inherited from this model's now legendary predecessors, the U 47 and the M 49.

Following the capsule is a tube that functions as an impedance converter. The next stage is an efficient, transformerless output circuit, that guarantees an extremely low self-noise level. Note: This innovative combination of current tube technology with the most advanced solid-state circuitry was decisive in awarding the 1997 TEC Award to the related M 149 Tube mic.

The M 147 Tube can feed extremely long microphone cables without affecting the quality of the audio signal.

Like all Neumann tube microphones, the M 147 Tube comes with an elegant satin nickel finish.

The microphone is delivered as a complete set in a high-quality aluminum case. Included with the microphone are a microphone cable, a metal swivel mount for a mic stand, and a compact universal power supply for standard mains sockets. Our modern manufacturing methods makes it possible to offer this complete set at a very attractive price.

Applications

The famous capsule, together with complimenting tube characteristics, makes the M 147 Tube especially well suited as a vocal mic. In addition, it is a superb spot mic for all types of musical instruments.

The extremely low self-noise of its tube circuitry makes the mic perfectly suited for use in modern recording chains, analog and digital.

Acoustic Features

The M 147 Tube is addressed from the side where the microphone body has the diamond-shaped Neumann company logo. The black color identifies tube microphones.

The capsule is equivalent to the one used in the U 47, and is the deciding factor in determining the sound characteristic. It has a flat frequency response to the upper midrange, and a boost of up to 3 dB above 2 kHz.

The headgrille design is a smaller version of the U 47. It protects the capsule effectively against popping and wind noise.

Polar Pattern

The M 147 Tube has a cardioid characteristic, leaning more toward super-cardioid due to its distinctive capsule design. At higher frequencies the pattern becomes more directional. This is very similar to the model after which this new tube microphone was patterned, the U 47 and the successor, the U 47 fet.

Features

- Universal tube microphone
- Pressure gradient transducer with the large diaphragm capsule from the legendary U 47 and M 49
- Transformerless circuitry
- Low self noise level
- Comes with swivel stand mount made of metal, universal power supply, and cable in an attractive aluminium case

Application Hints

- Vocalist mic: its warm and yet transparent sound gives volume and presence
- Announcer's mic for broadcasting/voice over
- Spot mic for close miking of solo instruments, especially strings, wind instruments, and piano

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

Delivery Range

M 147 Tube microphone,

Meaning of color codes: blk = black, ni = nickel

Electrical Features

When compared to other microphones, the impedance converter used in the M 147 Tube is distinguished by its extremely low self-noise level of only 12 dB-A / 24 dB CCIR weighted.

Similar to the recently introduced M 149 Tube, the new M 147 Tube combines a specifically selected vacuum tube (triode) with modern circuitry. This technique takes full advantage of the special transfer characteristics of the tube and passes the processed audio signal of the capsule to the microphone output, without any coloration or unwanted side effects.

The tube amplifies the capsule's signal by approximately 10 dB, thus preventing any possible influences from subsequent electronics. The M 147 Tube delivers a high output voltage, and therefore can feed microphone cables up to 300 m length without signal degradation.

The ideal operating conditions (anode current and heater voltage) of the tube are maintained throughout its life expectancy. A sensor lead detects any voltage drop that occurs through the microphone cable and compensates for it in the N 149 A power supply.

The tube warms up gradually using inverse current limiting to guarantee long life.

Operational Stability

Both, the capsule and the entire circuitry are shock mounted to prevent any structure-borne noise.

Because of its wide operating range, the M 147 Tube can reproduce extremely low frequency signals without distortion.

This implies that the microphone may also be sensitive to unwanted LF interference by structure-borne noise, or wind noise. To avoid possible signal degradation, we offer the EA 1 elastic suspension and the WS 87 windscreens as accessories.

During close miking of vocals we recommend using the PS 15 or PS 20 a pop screen. You will find detailed information in our accessory catalog.

Filter

The electronic circuitry of the M 147 Tube mic has a flat frequency response from 20 Hz to well above 20 kHz. Only the attributes of the capsule determine the typical sound characteristics of the microphone.

N 149 A Power Supply

The N 149 A universal power supply works with all mains AC voltages from 100 V to 240 V, 50 or 60 Hz. Mains power is connected through a standard IEC 320 mains socket. The only difference between the three versions of the M 147 Tube set is the power cord supplied. Note: The N 149 V power supply is fully compatible with the M 147 Tube microphone.

NEUMANN.BERLIN

► THE MICROPHONE COMPANY

The M 149 Tube is a variable dual-diaphragm microphone. The K 49 capsule – well-known from the legendary U 47 and M 49 microphones – is followed by a tube functioning as an impedance converter. In contrast to earlier concepts – utilizing a transformer – the tube is complemented with a transformerless output circuit design.

The M 149 Tube can thus feed long microphone cables without any coloration.

Two slide switches are located below the large, acoustically very open headgrille.

The switch at the front allows selection one of nine directional patterns. The slide switch at the rear operates a seven-step high pass filter. It allows a very fine adjustment of the cut-off frequency.

Applications

There are nine polar patterns to choose from, making this microphone an ideal choice for a wide range of recording situations.

As its ancestors, the M 149 Tube is a superb vocalist microphone, not only because of the capsule, but also due to its modern circuitry, characterized by extremely low noise level.

Acoustic features

The M 149 Tube is addressed from the front, marked with the Neumann logo. Also on the front is the switch for the selection of the polar patterns.

The capsule is mounted elastically inside the headgrille to eliminate structure borne noise. The surface below the capsule is shaped like a cone to disperse any reflected sound from the acoustic upper half space. This avoids any interference with the primary sound arriving at the capsule directly.

A large headgrille surrounds the capsule. It is acoustically very open and therefore increases the sonic realism.

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Polar patterns

The polar pattern switch selects one of nine directional patterns: omnidirectional, wide-angle-cardioid, cardioid, hypercardioid, figure-8, and one additional intermediate pattern between each major position.

Electrical features

The circuit of the M 149 Tube microphone has been developed to exceed traditional designs. We have selected a modern tube (triode) and combined its exceptional transmission characteristics with the advantages of our proven transformerless output circuit. The aim was to provide a more controlled environment for the audio signal on its path from the capsule to the output section.

The final stage is an integrated amplifier, especially designed for such applications. It features very low distortion (THD < 0.002 % at ± 10 V), very low self-noise, and high output current capability. As a result, the tube circuit is completely decoupled from the microphone output and its characteristic response curve will be unaffected by very high signal levels or varying load conditions.

The lower output impedance and higher output current capability allow cable lengths up to 300 m (1000 feet) without any degradation of the audio signal.

The tube amplifier changes the high impedance of the capsule and adds 10 dB of gain to the audio signal, providing optimum operating spec-

Technical Data

Acoustical operating principle	Pressure gradient transducer
Directional pattern	Omnidirectional, wide angle cardioid, cardioid, hypercardioid, figure-8 plus one intermediate position each
Frequency range	20 Hz - 20 kHz

¹⁾ Omnidirectional / cardioid / figure-8 ²⁾ according to IEC 60268-1; CCIR-weighting according to CCIR 468-3, quasi peak; A-weighting according to IEC 61672-1, RMS ³⁾ measured as equivalent el. input signal

ifications. The wide dynamic range is impressive, as peak output can be ± 10 V, at 20 mA.

The ideal operating point of the tube is maintained throughout its entire life expectancy. Plate current and filament voltage are constantly regulated. A sensor circuit monitors and compensates for any voltage drop across the microphone cable. The tube is heated up slowly through inverse current limiting to guarantee long life. Optimum operating conditions are reached within a very short time.

Filter

A seven-position slide switch is located on the back of the microphone. It selects a high-pass filter, advancing in half-octave steps between 20 Hz and 160 Hz (-3dB). This filter is useful to suppress rumble from air-conditioning and in windy situations.

In addition, the filter provides an effective tool to control the audio signal when the microphone is used at close distance and therefore proximity effect alters the program material.

Delivery Range

The specifically designed new N 149 A power supply unit feeds the M 149 Tube through an 8-core cable. The output connector for the audio signal is a 3-pin XLR. The output signal is balanced.

The microphone comes as a set in a high-quality aluminum case, together with the 8-core microphone connecting cable, the N 149 A power supply with plug-in mains unit, the EA 170 full elastic microphone suspension and a dust cover.

Features

- Switchable tube microphone
- Transformerless circuitry
- High output level
- Pressure gradient transducer with the M 49 capsule
- Acoustically very open wire mesh cage
- Nine directional characteristics: omni, wide angle cardioid, cardioid, hypercardioid, figure-8, and one intermediate position each
- 7fold switchable low frequency roll-off

Application Hints

- Universal tube mic
- Its warm and yet transparent sound gives volume and presence to a vocalist
- A wide range of adjustments provide the most subtle differentiation of sound, especially in the range of proximity effect
- Mic for broadcasting, dubbing, and voice-over
- Spot mic for close miking of solo instruments, especially strings, wind instruments, and piano

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

M 150 Tube

▶ **Tube Microphone**

www.neumann.com

NEUMANN.BERLIN

» THE MICROPHONE COMPANY

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Since the 1950s, the Neumann M 50 has been heralded as the ideal microphone for orchestral recording and string scoring. With its phenomenal transient response and unique directional characteristic, this classic mic has endeared many fans, both in the control room and on the soundstage.

The new M 150 Tube takes many of the features from the original M 50 and incorporates them in a very modern microphone. With low self noise, a Titanium membrane and capsule, transformerless tube amplifier and sophisticated power supply, the M 150 Tube is not a reissue but an entirely new microphone in its own right.

Acoustical features

The Titanium diaphragm of the pressure capsule is 12 mm in diameter and is exceedingly thin. Although Titanium has been known to have unique and desirable characteristics for some time, it has, until very recently, been very difficult to procure in the quality necessary for use in a microphone of this type.

The headgrille is shaped just like that on the original M 50, as requested by various top engineers in the recording industry. Due to mounting the pressure capsule with the diaphragm flush to the surface of a small (40 mm) sphere, the directional characteristic of the M 150 Tube is entirely unique.

At the lowest frequencies, this system is a pure omnipressure transducer with a perfectly circular polar pattern. However, in the mid- and upper frequencies, the pickup pattern becomes more narrow.

The M 150 Tube is an ideal microphone for any stereo, 5.1 or 7.1 surround recording, particularly DECCA Tree technique.

Features

- All Titanium capsule
- Unparalleled transient accuracy
- Pressure omni capsule for extended low frequency response
- Modern version of the world-famous M 50
- Very low self noise of 15 dB-A
- Transformerless tube amplifier based on the award-winning M 149 Tube microphone
- Ideal for DECCA tree recording and surround miking techniques
- Stereo sets with consecutive serial numbers

Electrical features

The dynamic range of the M 150 Tube is 119 dB, allowing reproduction of the full musical expression, without restraint.

With a low self noise of 15 dB-A, more gain can be used without risk of adding noise to the final product. The transformerless output circuit of this microphone allows for extremely fine reproduction of small signals and low frequency information. Also, long cable runs can be used with no loss of signal quality.

Application Hints

- Its special acoustic properties make this an ideal mic for most classical recordings
- A superb AB stereo pair for perfect balance of direct and reverberant sound
- Decca tree, setup with three microphones
- A highest quality spot (solo) mic

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

TLM 49

► **Large Diaphragm
Microphone**

www.neumann.com

NEUMANN.BERLIN

► THE MICROPHONE COMPANY

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

The TLM 49 is a large-diaphragm studio microphone with a cardioid directional characteristic and a warm sound which is especially optimized for vocal performance. It is supplied as a set, with an elastic suspension.

The design is inspired by that of the legendary M 49 and M 50 microphones of the 1950s. Naturally the TLM 49 has the typical Neumann fine matte nickel finish. The “sound design” is also oriented toward that of the M 49 and the U 47.

By combining its retro look with proven Neumann transformerless circuit technology, this microphone ensures low self-noise and the use of high gain levels.

Applications

During the development phase, the sound was adjusted in extensive practical tests, so as to make the TLM 49 ideal particularly for vocal and speech recording. However, in addition, it is also suitable for instrumental applications in professional production studios and demanding home recordings.

Polar patterns

The large-diaphragm capsule of the TLM 49 provides a cardioid directional characteristic with a tendency toward supercardioid, due to the special capsule construction. Following the example of the M 49, high frequencies are more directional. The capsule diameter is 34 mm.

The front of the microphone is indicated by the red Neumann logo on the microphone body. The capsule is oriented so that the microphone is addressed from the front.

Acoustic features

The TLM 49 uses the famous K 47 capsule, which was also used in the M 49 and the U 47. The capsule has a linear frequency response up to the upper mid-range. Above 2 kHz there is a gentle presence boost up to 3 dB.

The capsule is enclosed by a large microphone headgrille, which is acoustically very open and is hence neutral with regard to the sound.

Electrical features

The letters TLM stand for “transformerless microphone”. With TLM technology the usual output transformer is replaced by an electronic circuit.

As with traditional transformers, it ensures good common mode rejection, and prevents RF interference that may influence the balanced audio signal.

Noise signals which affect the balanced modulation line are therefore effectively suppressed. The microphone can operate at sound pressure levels of up to 140 dB, and provides a dynamic range of 117 dB (A-weighted).

Operational reliability

The entire interior structure is mounted elastically, to prevent the transmission of structure-borne noise. In addition, the capsule is mounted with a rubber shock mount.

Due to the wide frequency response, the TLM 49 can also transmit extremely low-frequency signals without coloration. Of course this means that the microphone is also sensitive to noise signals such as vibration noise and wind noise in this frequency range. The TLM 49 is therefore supplied with the elastic suspension EA 3, which effectively protects the microphone from structure-borne noise. If the microphone is addressed at extremely close range, pop screen PS 15 or PS 20 a can be used in front of the microphone to provide protection against plosive sounds.

Features

- Sound profile optimized for vocal performance
- Pressure gradient transducer with the large-diaphragm capsule of the legendary U 47
- Cardioid characteristic
- Retro design
- Transformerless output circuitry
- Acoustically very open wire mesh headgrille
- Complete set with elastic suspension

Application Hints

- Vocal microphone: Lends richness, power and brilliance to the voice, while remaining balanced and transparent
- Announcer's microphone for broadcasting, dubbing and voice-overs
- Spot microphone and for recording e.g. strings, piano and guitar

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

TLM 102

► **Large Diaphragm
Microphone**

www.neumann.com

NEUMANN.BERLIN

» THE MICROPHONE COMPANY

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

The TLM 102 defines a new generation of Neumann studio microphones. This applies not only to the design of the microphone but also to the price.

Smart. Sweet. Powerful.

The reduced overall size contributes to an exceptionally compact appearance, which unites all of the typical design components of a Neumann microphone. The harmonious proportions and gleaming grille ring ensure that even at first glance, the TLM 102 attracts attention.

The TLM 102 is impressive in terms of sound: In the interior is a newly developed large-diaphragm capsule (cardioid) with a maximum sound pressure level of 144 dB, which permits the recording of percussion, drums, amps and other very loud sound sources, for example. Instruments that are not especially loud also benefit from the very fast transient response of the TLM 102. However its most important applications are in the realm of vocals and speech; a slight boost above 6 kHz provides for excellent presence of the voice in the overall mix. Up to 6 kHz the frequency response is extremely linear, ensuring minimal coloration and a clearly defined bass range. The capsule is elastically mounted for the suppression of structure-borne noise. A pop screen integrated into the grille serves to suppress plosives in vocal and speech recording.

Due to its price and flexible field of application, the TLM 102 is ideal for the home recording and project studio sector, as well as for the broadcasting area, especially when clear lines of sight to the speakers are a priority.

The TLM 102 is available in black and nickel, a stand mount is included.

Features

- Large-diaphragm microphone with cardioid directional characteristic (pressure gradient transducer)
- Compact, characteristic but smaller-scale Neumann design
- Very high maximum sound pressure level
- Slight presence boost above 6 kHz
- Transformerless circuitry

Application Hints

- Vocals and speech
- In particular, pickup of especially loud instruments: Drums, percussion, wind instruments and amps
- Home recording, project and broadcasting studios

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

TLM 103

► **Large Diaphragm
Microphone**

www.neumann.com

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

The TLM 103 is the ideal large diaphragm microphone for all professional and semi-professional applications requiring the utmost in sound quality on a limited budget.

By utilizing the tried and true transformerless circuit found in numerous Neumann microphones, the TLM 103 features yet unattained low self-noise and the highest sound pressure level transmission. The capsule, derived from that used in the U 87, has a cardioid pattern, is acoustically well-balanced and provides extraordinary attenuation of signals from the rear.

The TLM 103 is available in satin nickel and matte black. Delivery includes an SG 1 metal swivel mount and a wooden jeweler's box.

Applications

Due to the universal cardioid pattern, straightforward handling, extremely low self-noise level, and finally, the price, the TLM 103 is predestined for all demanding applications from home recording to professional broadcasting and commercial recording studios.

Polar pattern

The TLM 103 is equipped with a large diaphragm capsule with cardioid pattern. By focusing on this pattern – used in most recording situations – the attenuation of unwanted rear sound has been optimized.

Off-axis sounds are rendered naturally while isolation is increased. This also leads to a high feedback suppression when the microphone is used in live situations or where loudspeaker playback is a factor.

Acoustic features

The TLM 103 is addressed from the front, marked with the red Neumann logo on the microphone body.

The K 103 large diaphragm capsule is based on the K 87, well known from the U 67 / U 87 microphones.

The capsule has a flat frequency response up to about 5 kHz, and above that, a wide flat 4 dB presence boost.

The large wire mesh headgrille protects the capsule from plosive sounds and effectively prevents pop noises.

These characteristics are achieved without resorting to corrective resonance effects. Therefore, the microphone maintains an excellent impulse response and reproduces the finest details of music and speech without coloration.

Electrical features

With just 7 dB-A / 17.5 dB CCIR the self-noise level of the TLM 103 is so reduced that even the smallest signals are reproduced basically noise-free. As it is capable of handling sound pressure levels up to 138 dB without distortion, the TLM 103 provides a dynamic range of 131 dB (A-weighted).

The letters TLM stand for "transformerless microphone". With TLM technology the usual output transformer is replaced by an electronic circuit.

As with traditional transformers, it ensures good common mode rejection, and prevents RF interference that may influence the balanced audio signal.

Operational safety

The entire internal construction is elastically mounted to attenuate any structure borne noise that could interfere with the TLM 103's operation. Furthermore the capsule is set on an elastic mount.

The frequency range reaches below 20 Hz and this even very low bass signals are reproduced without coloration.

Due to this low frequency extension, the TLM 103 is more sensitive to structure borne interference and wind noise. For such cases, the elastic suspension EA 1 and the windscreen WS 87 are available as accessories. For close vocal use, the PS 15 or PS 20 a pop screens are recommended.

Features

- Large diaphragm cardioid microphone
- Pressure-gradient transducer with one-diaphragm capsule
- Transformerless circuitry
- Extremely low noise: 7 dB-A
- Includes swivel mount
- Straightforward handling for homerecording and professional studios
- High-quality professional equipment for limited budgets

Application Hints

- A universal cardioid mic
- Vocalist recording
- Announcer's mic for broadcasting/voice over
- Due to minimal self-noise: on-air mic for radio/broadcast, very low amplitude signals, radio drama, sampling, foley/sound effects
- Home recording and project studios
- Spot mic for wind instruments, strings, percussion, guitar amps, drum overhead

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

▶ THE MICROPHONE COMPANY

TLM 193

► **Large Diaphragm
Microphone**

www.neumann.com

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Features

- Large diaphragm cardioid microphone
- Pressure-gradient transducer
- Transformerless circuitry
- Extremely low noise: 10 dB (A)
- Includes swivel mount
- The "plug and play" microphone for professional studios, musicians and homerecording applications
- High-quality professional equipment for mid-size budgets

The TLM 193 is a large diaphragm microphone with a cardioid polar pattern. With this microphone Neumann continues its long tradition, and is offering high end technology at an affordable price for musicians and the home recording studio.

The microphone uses a transformerless circuit, featuring extremely low self noise and large dynamic range.

The polar response is very linear over a wide incidence angle. Thus, even signals coming from the side are reproduced faithfully and without coloration.

The exposed surface of the microphone capsule is at ground potential, making it immune to typical interference and contamination. The microphone is supplied with a swivel mount.

Applications

The TLM 193 is a microphone with cardioid characteristic for professional recording and live applications. It is the ideal microphone for professional productions, for musicians and project studios.

Polar pattern

The TLM 193 has a large diaphragm capsule with cardioid characteristic.

Acoustic features

The TLM 193 is addressed from the front, marked with the Neumann logo.

The large diaphragm capsule inside the headgrille has a very smooth frequency response for all polar patterns over a wide acceptance angle.

The curves are flat and parallel to the 0° frequency curve up to 10 kHz within a pickup angle of $\pm 100^\circ$.

The TLM 193 differs from omnidirectional pressure transducers, where, due to physical reasons, the diffuse-field and free-field responses never agree.

This microphone has a very even diffuse-field response for all polar patterns. This is important in a reverberant environment, as more reflections arrive at the microphone from different directions.

The acoustic information is not affected in its tonal quality when recorded by the microphone. This characteristic is achieved without resorting to corrective resonance effects.

Therefore, the microphone maintains an excellent impulse response reproducing all transient phenomena of music and speech without coloration.

Electrical features

The letters TLM stand for "transformerless microphone". With TLM technology the usual output transformer is replaced by an electron-circuit.

As with traditional transformers, it ensures good common mode rejection, and prevents RF interference, that may influence the balanced audio signal.

Compared to other microphones the self noise level of the TLM 193 is considerably reduced. As it is capable of handling sound pressure levels up to 140 dB without distortion, the TLM 193 provides a dynamic range of 130 dB (A-weighted).

Operational safety

All exposed surfaces of the microphone capsule, including the diaphragms, are at ground potential. This technology makes them highly immune to electrical and atmospheric interference and contamination through microscopic dust particles.

The capsule is elastically mounted to avoid any structure borne noise that could interfere with its operation.

The frequency response of the TLM 193 amplifier is linear down to 20 Hz. Even very low bass signals are reproduced without coloration.

This implies that the microphone becomes more sensitive to subsonic frequencies, from structure borne noise or pop and wind noise.

To avoid any LF interference, we recommend to use the EA 1 elastic suspension, the PS 15 pop screen, or the WS 89 windscreens.

Application Hints

- A universal cardioid mic
- Ideal for close miking of instruments with high sound pressure levels
- Announcer's mic for broadcasting/dubbing
- Home recording and project studios
- Vocalist recording
- Spot mic for
 - wind instruments
 - strings
 - percussion
 - guitar amps

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

► THE MICROPHONE COMPANY

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

In the world of studio microphones, the numbers "47", "67" and "87" have associations that inspire enthusiasm among professionals in the field. It is of course no coincidence that the name of the new TLM 67 contains the number "67". In many respects, the TLM 67 is based on the "workhorse" of the 1960s, the legendary U 67. Like the U 67, the TLM 67 incorporates the K 67 capsule. In addition, the special new circuit design closely reproduces the sound characteristics of the classic U 67, without the use of tubes. Similar Neumann circuit technology has already proved very successful in the TLM 49.

The TLM 67 is extremely versatile. Its three switchable directional characteristics (omnidirectional, cardioid and figure-8), selectable 10 dB pre-attenuation and high-pass filter permit detailed adjustments to be made, depending upon the specific recording situation.

Exterior design

The TLM 67 is a large-diaphragm condenser microphone in the classic Neumann style, with a unique dual-color design. The stylish pearl-gray of the microphone body combined with the classic Neumann nickel lends the microphone a touch of distinctive individuality.

The legendary, frequently imitated design of the Neumann U 67 was the first to be developed by Neumann employees in collaboration with the famous German designer, Wilhelm Braun-Feldweg. The design of the TLM 67 represents a contemporary development of that of the U 67, transferring its positive impact to the present era. The enhanced exterior design thus links past and future microphone design trends.

On the occasion of its 80th anniversary, the Neumann company is honoring its founder, Georg Neumann, with a three-dimensional metal emblem on the front of the TLM 67. The distinctive Neumann attraction is conveyed in every detail of the microphone.

Applications

Due to its extensive control features, the TLM 67 is suitable for a wide range of applications. In addition to its primary role as a vocal microphone for all types of music and spoken voice, in orchestral recordings the TLM 67 can be used as a main microphone and as a spot microphone for individual instruments.

Acoustic features

The microphone is addressed from the side on which the Neumann logo is located.

A large wire mesh grille encloses the elastically mounted double diaphragm capsule. The directional characteristics omnidirectional, cardioid or figure-8 can be selected via a switch below the grille. The selected setting is indicated by a symbol shown in a window above the switch.

Electrical features

The letters "TLM" stand for "transformerless microphone". In the TLM 67, an electronic circuit is used rather than a conventional output transformer. Like a transformer, the circuit ensures good common mode rejection, effectively suppressing interference signals that affect the balanced modulation line. The microphone can operate at sound pressure levels of up to 105 dB without distortion, and has a dynamic range of 94 dB (A-weighted), without the use of the pre-attenuation switch.

Filter and pre-attenuation

The pre-attenuation switch on the back of the microphone can be used to reduce transmission levels by approx. 10 dB. It should be used only when there is a risk of overloading following devices due to very high sound pressure levels. Use of the switch does not increase the dynamic range of the microphone, but rather shifts it by 10 dB, to higher sound pressure levels. The other switch on the back of the microphone can be used to change the cutoff frequency of the built-in high-pass filter, so as to suppress the effects of impact sound and wind noise, or to compensate for the proximity effect.

Operational reliability

Elastic mounting of the capsule supplies protection from the transmission of structure-borne noise. If required, the EA 87 elastic suspension and WS 87 windscreen are available as accessories, for further suppression of structure-borne and wind noise. The PS 15 or PS 20 a popscreen can be used if the microphone is to be addressed at close range.

Features

- Sound characteristics based on the legendary U 67
- Three switchable directional characteristics
- Switchable high-pass filter and pre-attenuation
- Transformerless circuit design
- New dual-color exterior design

Application Hints*

- Extremely versatile
- Vocal microphone (soloists and background choir)
- Broadcasting, dubbing and voiceovers
- Overhead microphone
- Spot microphone, and suitable e.g. for strings, especially cello and double bass, as well as piano

TLM 170 R

► **Large Diaphragm
Microphone**

www.neumann.com

NEUMANN.BERLIN

► THE MICROPHONE COMPANY

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

The TLM 170 R was the first microphone to use the successful fet 100 technology. Along with a balanced, transformerless output stage it features extremely low self-noise and an impressive dynamic range.

Five directional characteristics are selectable by means of a rotary switch. In the sixth position, marked "R", the directional patterns can be controlled remotely with the N 248 power supply. There is no special cable necessary for this purpose.

The microphone has at its rear a 10 dB attenuation switch for extremely high sound pressure levels, and a high-pass filter to suppress structure born noise.

Applications

The TLM 170 R condenser microphone is a large diaphragm microphone with multiple polar patterns. Its sound has a very transparent characteristic, in contrast to some of our other microphones that have a distinct personality.

Therefore, this microphone is used for many diverse applications in professional recording studios, in broadcasting, film and television, and for semiprofessional productions. The polar patterns can be selected either at the microphone itself, or controlled remotely through the special N 48 R-2 power supply.

Acoustic features

The microphone is addressed from the front, marked with the Neumann logo. The large diaphragm capsule inside the headgrille has a

Features

- Local and remote controlled large diaphragm microphone
- Pressure-gradient transducer with double membrane capsule
- Five directional characteristics: omni, wide angle cardioid, cardioid, hypercardioid, figure-8
- Patented circuitry for remote and local switching of directional characteristics
- Switchable low frequency roll-off and 10 dB preattenuation
- Tiltable, elastically suspended bracket mount

very smooth frequency response for all polar patterns over a wide acceptance angle. The curves are flat and parallel to the 0° frequency curve up to 10 kHz within an angle of $\pm 100^\circ$.

As a result the TLM 170 R has a very even diffuse-field response for all polar patterns. This is important in a reverberant environment, as more reflections arrive at the microphone from different directions. The acoustic information is not affected in its tonal quality when recorded by the microphone. This characteristic is achieved without resorting to corrective resonance effects.

Therefore, the microphone maintains an excellent impulse response reproducing all transient phenomena of music and speech without any coloration.

The capsule is elastically mounted to avoid any structure borne noise that could interfere with its operation.

Polar patterns

In addition to the usual directional polar patterns: omnidirectional, cardioid, and figure-8, we have added a hypercardioid and wide-angle cardioid characteristic. When compared to the standard cardioid pattern, the hypercardioid characteristic suppresses sound from the side more efficiently. The wide-angle polar pattern is especially useful to record large sound sources.

Remote control

The N 248 controls the polar pattern remotely by varying the phantom voltage. The range is ± 3 V of the nominal 48 V value. (According to DIN standard a range of ± 4 V is permissible.)

The rotary switch on the microphone must be in the position R (= remote control). In this switch position the TLM 170 R microphone analyses the absolute value of the phantom power and selects the corresponding polar pattern. A standard 3-pin microphone cable is used, similar to the microphone's conventional operation. Cable lengths may be up to 300 m (1000 feet).

Electrical features

The letters TLM stand for "transformerless microphone". With TLM technology the usual output transformer is replaced by an electronic circuit.

As with traditional transformers, it ensures good common mode rejection, and prevents RF interference, that may influence the balanced audio signal.

Technical Data

Acoustical operating principle	Pressure gradient transducer
Directional pattern	Omnidirectional, wide angle cardioid, cardioid, hypercardioid, figure-8
Frequency range	20 Hz...20 kHz
Sensitivity at 1 kHz into 1 kohm	8 mV/Pa

Current consumption (P48, IEC 61938)	3 mA
Matching connector	XLR3F
Weight	625 g
Diameter	60 mm
Length	152 mm

¹⁾ according to IEC 60268-1; CCIR-weighting according to CCIR 468-3, quasi peak; A-weighting according to IEC 61672-1; RMS ²⁾ measured as equivalent el. input signal

Operational safety

All exposed surfaces of the capsule, including the diaphragms, are at ground potential. This technology makes them highly immune to electrical and atmospheric interference and contamination through dust particles.

Filter and attenuation

The TLM 170 R microphone has a 10 dB attenuation switch to prevent the input of the following unit from being overloaded.

A second switch at the rear allows to attenuate the frequency response below 100 Hz to suppress undesired structure borne noise.

Use on tripods

The TLM 170 R is provided with a tilting side bracket to attach the microphone to booms or stands. The bracket is equipped with rubber elements that effectively protect the microphone from mechanical shock.

If necessary, it can be mounted on the other side of the microphone as well.

When using the IC 4 cable (for example to suspend the microphone from the ceiling with the MNV 87 auditorium hanger), the bracket and its holder need to be removed.

The microphone can then be connected to the swivel mount connector of the cable.

Application Hints

- For universal use, very transparent, without coloration
- Announcer's mic for broadcasting, dubbing, voice-over
- Ideal mic for close miking of instruments with high sound pressure levels
- Spot mic for wind instruments, especially trumpet and saxophone, strings piano, kick drum, guitar amps
- During recordings when the mic is in a location where it is difficult to change polar patterns, for example, suspended from a ceiling. A special remote control is available.

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

NEUMANN.BERLIN

» THE MICROPHONE COMPANY

U 87 Ai

► **Large Diaphragm
Microphone**

www.neumann.com

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Features

- Variable large diaphragm microphone
- Pressure-gradient transducer with double membrane capsule
- The studio microphone classic
- Three directional characteristics: omni, cardioid, figure-8
- Switchable low frequency roll-off
- Switchable 10 dB pre-attenuation
- Ideal as main and as support microphone in the most differing recording situations

The U 87 is probably the best known and most widely used Neumann studio microphone. It is equipped with a large dual-diaphragm capsule with three directional patterns: omnidirectional, cardioid and figure-8. These are selectable with a switch below the headgrille.

A 10 dB attenuation switch is located on the rear. It enables the microphone to handle sound pressure levels up to 127 dB without distortion.

Furthermore, the low frequency response can be reduced to compensate for proximity effect.

Applications

The U 87 Ai condenser microphone is a large diaphragm microphone with three polar patterns and a unique frequency and transient response characteristic.

Users recognize the microphone immediately by its distinctive design. It is a good choice for most general purpose applications in studios, for broadcasting, film and television.

The U 87 Ai is used as a main microphone for orchestra recordings, as a spot mic for single instruments, and extensively as a vocal microphone for all types of music and speech.

Acoustic features

The U 87 Ai is addressed from the front, marked with the Neumann logo.

The frequency response of the cardioid and figure-8 directional characteristics are very flat for frontal sound incidence, even in the upper frequency range.

The microphone can be used very close to a sound source without the sound becoming unnaturally harsh.

By means of a high-pass filter interferences through subsonic and low frequencies are reduced remarkably.

Polar patterns

The dual-diaphragm capsule is elastically mounted and protected by a large headgrille.

A switch below the headgrille selects the three directional patterns: omnidirectional, cardioid and figure-8.

A window above this switch shows the symbol of the selected characteristic.

Electrical features

The letter A in the name indicates a more recent generation, as compared to the U 87 i microphones that were built from 1967 to 1986. Modifications apply to the electronic components of the microphone only; the capsule remained unchanged.

The present-day circuitry increases the operational headroom of the U 87 Ai by supplying the bias voltages for the capsule through a reduced resistance. The result is a higher sensitivity of 10 dB for identical sound pressure levels, and an improved S/N ratio of 3 dB.

Filter and attenuation

A switch located at the rear attenuates the sensitivity by 10 dB. When this switch is activated, the microphone accepts sound pressure levels up to 127 dB (equivalent to a sound pressure of 45 Pa) without distortion.

An additional switch at the rear allows to change the microphone's cutoff frequency. This reduces low frequency interference directly at the input of the microphone amplifier.

This setting also compensates for the unavoidable bass boost that occurs with all pressure gradient transducers when they are used at close distance (proximity effect).

The cardioid characteristic maintains a smooth frequency response at a distance of 30 to 40 cm, the figure-8 characteristic even at a distance of 15 to 20 cm.

Application Hints

- For universal use
- The classical studio mic for vocalists (soloists and background vocalists)
- Announcer's mic for broadcasting, dubbing, voice-over
- Overhead
- Spot mic for
 - wind instruments
 - strings (especially cello and double bass)
 - piano
 - percussion
- Note: To record instruments with very high sound pressure levels we recommend our mics with TLM circuitry

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

U 89 i

► **Large Diaphragm
Microphone**

www.neumann.com

The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Features

- Variable large diaphragm microphone
- Pressure-gradient transducer with double membrane capsule
- Five directional characteristics: omni, wide angle cardioid, cardioid, hypercardioid, figure-8
- Thereby most versatile in all recording situations
- Two-stage roll-off filter
- Switchable 6 dB pre-attenuation
- Extended frequency range in comparison to U 87 Ai

The U 89 is a studio microphone for universal applications. The headgrille protects a dual-diaphragm capsule. A rotary switch below the headgrille selects from five different polar patterns. Therefore the microphone can be adapted easily to large sound sources, and those that are spread wide apart, or to sound sources to be recorded at a greater distance.

The amplifier accepts sound pressure levels up to 134 dB without distortion. This figure can be increased to 140 dB. An additional rotary switch activates a filter that changes the low frequency response either below 80 Hz or 160 Hz.

Applications

The U 89 i is similar in appearance to the U 87. It is of smaller size, and lighter weight. It features five instead of three directional characteristics and a higher maximum sound pressure level which make this microphone easier adaptable to different applications.

Polar patterns

In addition to the usual directional polar patterns: omnidirectional, cardioid, and figure-8, we have added a hypercardioid and wide-angle cardioid characteristic.

When compared to the standard cardioid pattern, the hypercardioid characteristic suppresses sound from the side more efficiently. The wide-angle polar pattern is especially useful to record large sound sources.

Acoustic features

The microphone is addressed from the front, marked with the Neumann logo. The large diaphragm capsule has a very smooth frequency response for all polar patterns over a wide acceptance angle. The frequency response curves are flat up to 10 kHz within a pickup angle of $\pm 100^\circ$.

As a result the U 89 i has a very even diffuse-field response for all polar patterns. This is important in a reverberant environment when more reflections arrive at the microphone capsule. The acoustic information is not affected in its tonal quality when recorded by the microphone.

This characteristic is achieved without resorting to corrective resonance effects.

The capsule is elastically mounted to avoid any structure borne noise that could interfere with its operation.

Filter and attenuation

The amplifier handles sound pressure levels up to 134 dB without distortion.

With a self noise level of 17 dB (A-weighted) the total dynamic range is 117 dB. Maximum sound pressure level is 140 dB when the -6 dB rotary switch is in the ON position.

A low frequency roll-off at 80 Hz or 160 Hz can be activated with the third rotary switch below the headgrille.

This filter suppresses low frequency interference, yet maintains an even frequency response for close-up sound sources, for example, when proximity effect could adversely affect the program material.

A steep high-pass filter in the LIN position prevents the output transformer of the microphone from being overloaded due to undesired subsonic frequencies.

Operational safety

All exposed surfaces of the microphone capsule, including the diaphragms, are at ground potential. This technology makes them highly immune to electrical and atmospheric interference and contamination through microscopic dust particles.

KK 104/105 S

▶ **Capsule Heads
for Sennheiser
SKM 5200/SKM 5000 N*
Wireless Systems**

www.neumann.com

Combining the Neumann KK 104/105 S capsule heads with the Sennheiser SKM 5200/SKM 5000 N* Wireless System thrusts the legendary Neumann sound into the wireless domain, thus opening up new dimensions in sound for sophisticated live-performance engineering.

Neumann KK 104/105 S Capsule Heads for Sennheiser SKM 5200/SKM 5000 N* Wireless Systems

In terms of engineering, the KK 104/105 S are based on the KMS 105, 140, and 150 family of wired vocal microphones.

They inherit not only their outstanding tonal characteristics and specifications but also their sturdiness and effi-

ciency in suppressing popping and handling noise.

The Sennheiser SKM 5200 and SKM 5000 N handheld transmitter are advanced versions of the SKM 5000*, optimized for the Neumann capsule heads, and ensuring reliable, interference-free, high-quality transmission of the capsule signal to the corresponding Sennheiser receiver.

The capsule and handheld transmitter are available with the typical Neumann nickel-colored finish and in black. The KK 104/105 S package includes a spacious, roadworthy nylon

Features

- Neumann capsule head engineering expands with Sennheiser liveperformance engineering
- Cardioid (KK 104 S) and Supercardioid (KK 105 S) characteristic
- Low susceptibility to handling noise
- Built-in, highly effective suppression of popping noises
- Easy dismantling for cleaning
- Pure, open, and neutral sound transmission

Delivery Range

Application Hints

- Vocals and speech on stage
- Especially suited for in-ear-monitoring
- Especially suitable with front-of-stage monitor systems
- For feedback-prone environment

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

pouch big enough to hold not only the capsule, but the transmitter, battery packs, and additional accessories as well.

These product components are a dream come true for countless customers, who time and again demanded a wireless variant of the successful Neumann KMS 104/105 vocal microphones. Simultaneously, this combination unites the core areas of competence of two established global players and market leaders: Neumann – the world's leading manufacturer of condenser microphones, and Sennheiser – the market leader with years of experience in the area of high-quality wireless systems.

* Also all existing Sennheiser SKM 5000 handheld transmitters can be upgraded with the Neumann KK 104 S and KK 105 S capsule heads. Still, to take full advantage of the acoustical properties of these heads it is recommended to utilize the SKM 5200 or SKM 5000 N.

** "Heavy duty" variant with integrated foam popscreen instead of wire mesh for even better plosive attenuation. In addition, foam material provides a very large surface area and can therefore absorb moisture very well.

KK 105 S / KK 105 (HD)

KMS Series

► **Vocal Microphones**

www.neumann.com

The KMS 104/104 plus and the KMS 105 microphones have been developed to optimally transmit the human voice with respect to the demanding conditions present on the live stage. The KMS series has become the internationally acknowledged standard for first-class stage microphones.

The high acoustic resolution and smooth frequency response of the microphones ensure that the musician has optimal control of the stage performance at all times.

Especially due to their low self-noise and crosstalk behavior which is free of coloration, the KMS microphones are ideal for use with in-ear monitoring systems.

The KMS 104 and the KMS 104 plus have a condenser microphone capsule with a cardioid directional characteristic which provides the best possible suppression of sounds originating from behind the microphone. In contrast, with its supercardioid characteristic the KMS 105 is particularly good at suppressing sounds originating from the entire 180° hemisphere behind the microphone. The KMS 104 plus features, compared to KMS 104, a more extended bass frequency response. In close cooperation with professional musicians, with the aid of extensive practical tests, the KMS 104 plus has been especially optimized for the requirements of female voices in the rock and pop field.

The user can thus select the version that is optimally suited to the specific application.

Acoustic features

The studio condenser capsules used in the microphone versions provide the basis for transmitting all the nuances of the human voice. In comparison with other handheld microphones, which operate mostly with dynamic capsules, the KMS series has a particularly high acoustic transparency, a wide frequency range and a fine resolution of transients.

In KMS microphones, carefully adjusted acoustic filters and transformerless impedance converters that can handle very high sound pressure levels prevent the microphones from being overloaded even by strong plosive sounds.

In spite of excellent pop protection, sibilants and "S" sounds are transmitted with their natural accentuation, as is possible only with condenser microphones. Furthermore, the above-mentioned acoustic filters are designed so that the distinctive directional characteristics of the capsules are preserved even in the bass range. The filters thus ensure a very high level of feedback protection for the KMS 104/104 plus and KMS 105 vocal microphones when they are used with a stage sound system.

Electrical features

Since vocal microphones are typically addressed at close range, for the bass frequency response of the microphones, electronic compensation is used for the proximity effect in the respective capsules.

In addition, the microphone has an invariable, built-in high-pass filter with a cutoff frequency of 120 Hz (-3 dB, measured in a free sound field). The dynamic range of the KMS microphones is 132 dB, and the maximum sound pressure level is 150 dB.

The low self-noise level of only 18 dB-A permits the microphones to be used at high gain levels without the risk of additional noise. Even at large distances, the microphones thus operate with a high signal-to-noise ratio, facilitating the freedom of movement and creativity that are important to the artist.

Due to the transformerless output circuit, the microphone signals can be transmitted even through long cables without loss of sound.

Mechanical features

Microphones designed for use on stage require a particularly robust construction. The KMS 104/104 plus and KMS 105 therefore have thick-walled metal housings, which also provide effective protection against handling noise.

The microphone headgrilles are made of hardened steel. If required, they can easily be unscrewed to permit cleaning of the interior acoustic filters.

Delivery Range

The KMS 104/104 plus and KMS 105 microphones, with a matching stand clamp, are supplied in an attractive padded nylon bag that is sufficiently durable for touring.

Features

- Neumann sound on stage
- Excellent transparency for vocals/speech
- Cardioid/Supercardioid polar pattern with excellent feedback rejection
- Without off-axis coloration
- Transformerless output
- Effective pop shielding without any side effects
- Set includes stand clamp

Application Hints

- Vocals and speech on stage
- Announcer's mic for broadcasting/dubbing
- Especially suited for in-ear-monitoring
- For feedback-prone environment

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

▶▶ THE MICROPHONE COMPANY

Series 180

▶ **Miniature
Microphones**

www.neumann.com

Features

- Three different miniature microphones for all typical studio applications
- Successor of the worldwide successful KM 83/84
- Transformerless circuitry
- Trouble-free operation also with unbalanced equipment (e.g., DAT recorders)
- Set includes windshield and two different microphone clamps

The “Series 180” consists of three compact miniature microphones with patterns that satisfy the demands of all common studio applications. Because of its optimized mechanical construction and conscious omission of modularity, which is unnecessary in many cases, the “Series 180” is predestined for economy-minded production and home recording studios.

The KM 183 omnidirectional and KM 185 hypercardioid microphones are based on the tremendously successful KM 184 cardioid microphone, which has become a standard within the global studio community in just a very short time.

All “Series 180” microphones are available with either matte black or nickel finish. They come in a folding box with a windshield and two stand mounts that permit connection to the microphone body, or the XLR-connector.

Applications

Their slender shapes and the transmission characteristics described below make the “Series 180” especially suitable for a very wide range of tasks in the radio and television sector.

Acoustic features

The KM 183 and KM 184 microphones are the successors of the well proven KM 83 and KM 84, which have been used since the seventies worldwide with great success. The KM 185 rounds out the series with a hypercardioid microphone.

The KM 183 is a pressure transducer with a boost of approximately 7 dB at 10 kHz in the free field. In the diffuse sound field it has a flat frequency response.

The pressure gradient transducers KM 184 and KM 185 feature very smooth frequency responses not only for the 0° axis, but also for lateral (off-axis) sound incidence. In typical usage, there is no coloration of sound over a wide pickup angle.

Although the KM 184 has the same capsule as the KM 84, the microphone differs slightly on the 0° frequency response: The KM 184 has a gentle rise at about 9 kHz, a characteristic that was introduced very successfully with the KM 140. The result is a tonal balance that is fresher and livelier when compared to the KM 84 with its flat frequency response in that band.

This difference was achieved with just a slight change of the capsule's rear opening, and is not due to resonances.

The KM 185 with its hypercardioid characteristic features attenuation of sound incidence from the side or rear of about 10 dB, with minimum sensitivity at an angle of 120°.

Electrical features

The "Series 180" microphones have the same transformerless circuitry as is used in the KM 100 system, resulting in excellent technical specifications: Compared to the KM 84 the dynamic range of the KM 184 increased by 24 dB mainly through the reduction of self-noise level to only 22 dB (CCIR) and an increased sound pressure handling capability of up to 138 dB.

The microphones operate without any problems, even if the input of following equipment happens to be unbalanced, for example as in some DAT recorders.

The output of the "Series 180", as in all Neumann microphones, is balanced and phantom (48V) powered.

Economy

The "Series 180" is a good choice for all users who look for a high-quality miniature microphone, but do not need the complex, modular KM 100 system, which continues to be part of the Neumann product range.

The mechanical construction was simplified, for example, capsule and output stage cannot be separated from each other. For this reason the "Series 180" is an economical alternative without giving up the electroacoustic features the users expect from Neumann microphones.

Application Hints

KM 183

- For close miking of instruments when there is no need to attenuate extraneous noise, and in a balanced acoustic environment to record
 - acoustic guitar,
 - wind instruments,
 - strings,
 - percussion,
 - drums
- Ideal as AB stereo pair because of the flat frequency response in the diffuse sound field
- As a main mic, especially for capturing room acoustics
- For stereo recordings with a baffle plate
- As a spot mic for
 - piano,
 - wind instruments,
 - organ,
 - choir

KM 184

- For universal use, especially for recording situations when it is necessary to attenuate off-axis sound (mainly from the rear) from other nearby instruments.
- As XY and ORTF stereo pair
- Announcer's mic for broadcasting
- Spot mic, overhead
- Close miking of
 - strings,
 - wind instruments,
 - percussion,
 - piano,
 - Leslie speakers,
 - guitar amps

KM 185

- Especially for recording situations when it is necessary to attenuate off-axis sound (lateral and rear) from other nearby instruments.
- As XY stereo pair
- Overhead, toms
- In situations that are susceptible to acoustic feedback
- To attenuate unwanted sound of nearby instruments
- Recording of speech, as in
 - TV,
 - movie and video productions,
 - PA systems
- Produces especially warm and bass supporting sound for artists who perform in proximity effect range

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

▶ **Miniature
Microphone System**

www.neumann.com

Features

- Miniature microphones with 7 exchangeable capsules
- Active capsules, detachable up to 50 m from the output stage
- Great variability through capsule extensions and goosenecks
- Switchable 10 dB pre-attenuation
- Set includes windshield and two different clamps
- Transformerless circuitry
- Extensive accessories

The variable condenser miniature microphone system consists of several active microphone capsules with different directional characteristics, an output stage, and numerous accessories.

Currently there are seven active capsules available: omni diffuse-field equalized, omni free-field equalized, cardioid, wide-angle cardioid, cardioid with bass roll-off, hypercardioid, and figure-8.

Through the modular construction of mic capsules and the output stage it is very easy to adapt the system to a wide range of applications. The mic becomes nearly invisible during work with cameras (film, video), on stage, or suspended from the ceiling in a concert hall.

An active capsule can also be screwed directly onto the output stage. The result is a compact miniature microphone.

Construction

The microphones are only 92 or 110 mm resp. long and 22 mm in diameter. They consist of the condenser capsule and the output stage. Both parts can be unscrewed from each other. The system offers several condenser capsules with different directional characteristics.

Numerous accessories can be mounted between the capsules and the output stage. The capsules attach to cables, capsule extensions, swivel mounts, table stands, goosenecks, stereo mounts, and hangers. Therefore, it is very easy to adapt the system to a wide range of applications.

The active capsule itself is only 35 or 47 mm resp. long. The KM 100 output stage and the active microphone capsule may be separated by up to 50 m of interconnecting cable. These cables are 3 mm in diameter, and therefore very inconspicuous.

Acoustic features

AK 20 is a pressure gradient transducer with the figure-8 characteristic, realized with a single diaphragm. The diaphragm diameter is just 16 mm. All sound field components reach the diaphragm directly. This results in identical frequency response curves and output levels at 0° and 180° sound incidence. Corresponding accessories allow combining the AK 20 with other active capsules or microphones to obtain an MS-Stereo setup.

AK 30 is a diffuse-field equalized pressure transducer with a flat frequency response up to 10 kHz (in the diffuse field). In the free sound field this microphone has a boost of approximately 7 dB at 10 kHz.

AK 31 is a free-field equalized pressure transducer with a flat frequency response up to 20 kHz (in the free field). In the diffuse sound field this microphone has a high frequency roll-off above 5 kHz.

AK 40 is a pressure gradient transducer with cardioid characteristic. The frequency curves are very smooth and match 0° sound incidence. Sound from sources within a pickup angle of $\pm 135^\circ$ is reproduced without any coloration.

AK 43 is a pressure gradient transducer with wide-angle cardioid characteristic. Attenuation at 90° is 4 dB, at 135° it is 8 dB and at 180° it is 11 dB. The frequency response curves for sound sources within an angle of $\pm 90^\circ$ are parallel up to 12 kHz.

AK 45 is a pressure gradient transducer with cardioid characteristic, similar to the AK 40. However, it has an acoustic bass roll-off that is useful during applications when subsonic and low frequencies may cause difficulties. The AK 45 is optimized for a flat low frequency response at a recording distance of 15 cm ("speech cardioid").

AK 50 is a pressure gradient transducer with hypercardioid characteristic. Attenuation of sound incidence from the side or rear is about 10 dB, with minimum sensitivity at an angle of 120°.

Electrical features

The KM 100 is phantom powered (48 V) and uses transformerless output circuitry. This has several advantages. It features high output capability and extremely low self noise. It provides exceptionally clean sound, free of any coloration. As with traditional transformers, this circuit approach ensures good common mode rejection. The balanced output signal is protected against interference.

The construction is extremely compact. The entire microphone circuitry is on a single hybrid module measuring only 2 cm² in area. It is built into the microphone capsule, therefore the term "active capsules".

All sensitive components are protected within the capsule. As a result, the quality of the audio signal is never compromised through the

use of accessories, for example, when the capsule is detached from the output stage and mounted on a cable or a gooseneck.

Even with a long cable between active capsule and output stage, the signal is immune to external interference.

Preattenuation

The output stage has a 10 dB switch. Attenuation is achieved by reducing the capsule voltage to one third.

When the switch is on, the microphone is capable of accepting sound pressure levels up to 150 dB without being overloaded.

Connectors

To diminish the number of connectors within the KM 100 System some accessories were modified. They can now be screwed directly onto the KM 100 output stage without using the KA 100 cable adapter. The new accessories which include the cable adapter, were renamed adding the suffix KA. For example: LC 3 is now LC 3 KA.

The separate KA 100 cable, needed for older accessories, will be available also in future.

The KM 100 output stage has a 3-pin XLR connector.

Sound diffraction sphere

The SBK 130 A sound diffraction sphere slips onto the front of the KM 130/KM 131 pressure microphones. The diaphragm becomes an integral part of the surface of the sphere. This affects the frequency response of the microphones.

While sounds coming from the front-half space are emphasized by up to 2.5 dB between 2 kHz and 10 kHz, sounds arriving from the rear-half space are attenuated by a maximum of 2.5 dB in the range above 5 kHz.

Since the sound diffraction sphere causes the pressure buildup of the KM 130/KM 131 pressure microphones to begin earlier, the frequency response rises smoothly in the middle

and upper range. This is similar to a typical pressure gradient microphone, where the directivity increases with rising frequencies. However, since the KM 130/KM 131 are pressure microphones, they maintain a linear sensitivity down to the lowest frequencies.

This changing directivity allows to record at a greater distance from the sound source, and makes the KM 130/KM 131 microphones especially suited as stereo main microphones in A-B configurations.

Stereo recordings

By means of the AC 30 adapter cable two active capsules, AK 20 and e.g. AK 40 can be connected as MS stereo pair directly with the MTX 191 (A) matrix amplifier. The XY or MS signal is then available at the 5-pin XLR output connector of the MTX 191 (A), and the recording angle can be electrically remote controlled. The output stages KM 100 are then not required.

Stereo set

The cardioid and hypercardioid microphones are also available as complete stereo sets, SKM 140 and SKM 150, including all accessories in a single jeweler's box.

A further SKM 100-MS Stereo Set containing the microphones KM 120 and KM 140 is available.

Application Hints

For recording situations where the microphone must remain "invisible".

KM 120

- MS-Stereo microphone (in combination with the KM 140)
- Two crossed AK 20s in Blumlein technique
- Inconspicuous spot microphone with optimum attenuation of lateral sound sources
- Single microphone for two speakers facing each other

KM 130

- Ideal as AB stereo pair in the diffuse sound field because of the flat frequency response
- As a main mic, especially for capturing room acoustics
- For stereo recordings with a baffle plate
- As a spot mic for piano, wind instruments, organ, and choir

KM 131

- For close miking of instruments when there is no need to attenuate extraneous noise, and in a balanced acoustic environment to record acoustic guitar, wind instruments, strings, percussion, and drums
- Flat frequency response for close miking, spot mic

KM 140

- Universal usage, especially in situations when it is necessary to attenuate sound coming from adjacent instruments
- As XY and ORTF stereo pair
- Announcer's mic for broadcasting
- Spot mic, overhead
- Close miking of strings, wind instruments, percussion, piano, Leslie speakers, guitar amps
- We recommend using an additional windscreen to minimize the effects of high wind velocity

KM 143

- Polar response characteristic acts more like an omni. Therefore, it is an ideal tool to record larger instrument ensembles
- As AB stereo pair, especially in rooms with less than ideal acoustics
- As spot mic for strings, wind instruments, percussion, and Leslie speakers
- Acts very neutral when used close up to bass instruments, such as double bass, bass amps, guitar amps

KM 145

- It naturally compensates for proximity effect
- Very neutral tonal balance during close miking of speech, as in TV, movie and video, PA
- Acts very neutral when used close up to bass instruments, such as double bass, bass amps, guitar amps, Leslie speakers, toms

KM 150

- As XY stereo pair
- Overhead, toms
- In situations that are susceptible to acoustic feedback
- To attenuate unwanted sound of nearby instruments
- Recording of speech, as in TV, movie and video productions, PA systems
- Produces especially warm and bass supporting sound for artists who perform in proximity effect range
- We recommend using an additional windscreen to minimize the effects of high wind velocity, and plosive sounds

These are just some of the most common applications. Detailed hints are described in the catalog "KM 100 Application Guide".

NEUMANN.BERLIN

» THE MICROPHONE COMPANY

KU 100

► **Dummy Head**

www.neumann.com

Features

- Dummy head for head-related stereophony
- Pressure transducer with flat diffuse-field frequency response
- Loudspeaker compatible
- Transformerless circuitry
- Two-stage switchable low frequency roll-off
- Switchable 10 dB preattenuation
- Balanced and unbalanced outputs (XLR and BNC)

The KU 100 dummy head is a binaural stereo microphone. It resembles the human head and has two microphone capsules built into the ears. When listening through high-quality headphones it gives the illusion of being right at the scene of the acoustic events.

When using the KU 100 dummy head, the binaural stereo experience moves the listener into the scene of the original performance, in contrast to other space-related recording techniques, where the acoustic event is moved to the listener.

The dummy head is also used in many industrial applications as a measuring device, for example in acoustic research.

The KU 100 can be operated with typical 48 V phantom powering, or from an external power supply unit, or from the built-in battery.

At the bottom of the unit is a switch for the different power supply modes, as well as connectors for balanced and unbalanced output signals.

Inside the head are additional switches for 10 dB attenuation and the high-pass filter.

The Idea

The KU 100 dummy head is a replica of the human head with a microphone built into each ear.

When the recorded audio signal is reproduced through high-quality headphones the listener perceives a sound image almost identical to the one he would have heard at the recording location of the dummy head (head-related stereophony).

When played back through loudspeakers, the sound matches to a high degree that of conventional stereo microphones, placed in the same position. However, a superior quality is added, that of a distinct spatial depth perception.

The KU 100 dummy head is just as easy to use during creative radio drama productions, and music recordings where the room acoustics should be recorded at the same time.

The dummy head is also contributed essentially as an important tool to preserve natural sounds of all kinds.

In addition, the dummy head is frequently used to examine and document the influence of noise in industrial applications at various working places under realistic conditions.

Electrical features

The KU 100 uses transformerless circuitry with the advantage of high output capability, fast transient response, and extremely low self noise. The usual output transformers are replaced by electronic circuits. As with traditional transformers, this technique ensures good common mode rejection, and prevents RF interference, that may influence the balanced audio signals.

The dummy head provides balanced (XLR) and unbalanced (BNC) outputs. It can be powered in three different modes:

from an external P48 phantom power supply,

with batteries as part of the internal battery supply,

or from an external AC mains supply (included with the system).

Filter and attenuation

A 10 dB switch inside the head attenuates the sensitivity. A second switch selects the cutoff frequency of the high-pass filter to be either linear, 40 Hz, or 150 Hz.

Delivery range

The KU 100 comes in a robust aluminum carrying case, together with an external power supply unit, a 5-pin XLR cable, and an adapter cable that splits the 5-pin XLR output into two 3-pin XLR connectors.

RSM 191

► **Stereo Shotgun
Microphone**

www.neumann.com

The RSM 191 is a stereo microphone system consisting of the microphone and the MTX 191 A matrix amplifier. It has an adjustable pick-up angle and high directivity.

The microphone has two separate capsule systems, a hypercardioid element and a figure-8, both in a short shotgun. Together they generate the mid and the side signals.

The matrix amplifier controls the width of the stereo image by changing the gain of the side signal relative to the middle signal in six 3 dB steps.

The output signals of the matrix amplifier are either mid-side (MS) or left/right (XY). The signals are converted through transformerless sum-and-difference circuitry.

The balanced, transformerless technology permits the use of long cables between the microphone, the matrix amplifier and the following mic input of other signal processing equipment.

Applications

The RSM 191 system is an ideal microphone system for:

Outdoor stereophonic news coverage, even in extremely noisy surroundings;

Stereo recordings for film and television where the actors are recorded simultaneously with acoustic ambience, or an orchestra;

Stereophonic motion picture sound where the width of the sound image must match the camera viewing angle.

Features

- Variable stereo shotgun microphone with shotgun and figure-8 patterns
- Interference/pressure-gradient transducer
- MS-stereo microphone, switchable to XY-stereophony
- Transformerless circuitry
- Switchable low frequency roll-off and switchable 10 dB preattenuation
- Set with case and accessories
- Battery or phantom powering

Construction

The RSM 191 consists of a capsule head containing two separate transducer systems and an amplifier section with two independent transformerless microphone amplifiers.

An interference tube system with a hypercardioid characteristic generates the middle signal, while a horizontal figure-8 assembly provides the side signal.

Acoustic features

The RSM 191 achieves its high directivity and special acoustic features through a unique construction. The microphone capsule assembly is mounted inside a housing tube that is acoustically open but has a high flow resistance.

This results in a high driving force for the diaphragm, even with a low pressure gradient factor of the capsule. Therefore, the microphone can suppress unwanted off-axis interference to a considerably higher degree than other microphones without such an interference tube.

The middle system (M-signal) combines high attenuation of lateral sound incidence, similar to a hypercardioid characteristic (which is about 10 dB), with the large front-to back ratio of the super-cardioid characteristic.

Therefore, sound from the rear is likewise attenuated by approximately 10 dB. This design approach makes the microphone less sensitive to wind or pop noise than other shotgun microphones.

The side system (S-signal) consists of two single capsules arranged back to back, closely behind the interference tube (M-signal) capsule. Arrows engraved on the microphone housing show their orientation.

The uniform and balanced performance characteristic of the microphone system is achieved without resorting to corrective resonance effects. Therefore, the microphone maintains

an excellent impulse response, reproducing all transient phenomena in music and speech without coloration. The entire internal construction is decoupled from the housing to avoid structure borne and handling noise.

Electrical features

The output signals of the included matrix amplifier are in either MS or XY format. The small capsules are mounted in close proximity to ensure transparent and coloration-free stereo sound with excellent mono-compatibility. The stereo acceptance angle is variable and controlled remotely.

Filter and attenuation

For the handling of very high sound pressure levels, a 10 dB attenuation can be switched ON to avoid overloading of the following equipment.

To suppress structure borne noise, a high-pass filter in the matrix box provides cutoff frequencies of 40 Hz, 80 Hz, and 200 Hz.

Battery supply

The RSM 191 system is fed from either 2 x P48 phantom power or from a 9 V battery inside the matrix box.

One alkaline battery provides 8 hours of operation.

M-System

S-System

USM 69 i

► **Stereo Microphone**

www.neumann.com

Features

- Switchable stereo microphone
- Two pressure-gradient transducers with double membrane capsules
- MS- or XY-stereophony
- Capsules rotary by 270°
- Very low noise
- Aperture and pick-up angles freely choosable
- Directional characteristics reproducibly switchable, omni, wide angle cardioid, cardioid, hypercardioid, figure-8

The USM 69 i stereo microphone has two separate dual-diaphragm capsules. These are mounted vertically and rotate against each other. The directional polar patterns can be selected separately for each capsule. The capsules operate independently from each other.

Applications

The USM 69 i condenser stereo microphone is a studio microphone for intensity stereo recording. It is suitable for XY and MS recordings.

Construction

The microphone consists of the amplifier section and the capsule head. The amplifier section contains two microphone amplifiers operating independently from each other. They have an extremely low self noise.

Two completely separate microphone capsules are positioned closely above each other within the capsule head. Their diaphragms are made out of gold-sputtered polyester film. The upper capsule rotates against the lower one over a range of 270°. Color markings on the lower capsule system help to identify the angle by which the upper capsule has been rotated.

When sound waves reach the microphone capsules from different directions they will generate audio signals with different intensity only, but not with time differences, since the capsules are in close proximity and the sound arrives at both capsules simultaneously. The result is an intensity stereo signal that can be summed together for excellent mono compatibility without causing interference.

Polar patterns

The USM 69 i has two built-in rotary switches. The five polar patterns of both capsules can be selected at the microphone itself. Therefore, no special AC power supply units or powering adapters are necessary.

The two outputs attach directly to any 48 V phantom powered connectors.

In addition to the usual polar patterns: omnidirectional, cardioid, and figure-8, we have added a hypercardioid and a wide-angle cardioid pattern.

A built-in DC converter generates the required capsule polarizing voltages.

Electrical features

The amplifiers feature high output capability and extremely low self noise. Distant sound sources, as well as very loud sound sources at close range can therefore be recorded without any problem.

Each amplifier has an active filter. It effectively suppresses subsonic interference as caused by wind or structure borne noise. At the same time, the filter prevents the output transformers from overloading through very low frequency energy.

Use as a mono microphone

The microphones may also be used as completely independent mono microphones. There are many applications when it is important to have a second mono microphone as a backup, or when the outputs of microphones with different polar response characteristics must be available simultaneously.

The outputs of the two microphone channels can be linked (cascaded). In addition to the individual directional patterns, other characteristics are available through the combination of both channels.

Operational safety

Both microphone systems operate completely independent from each other.

The second amplifier will be unaffected, even in case of a faulty ground of the supply voltage for one of the channels, or a short circuit in one of the outputs.

The microphone is reliable in mono usage, even if only one of the systems is operated and connected. Its simple and redundant circuitry guarantees a low failure rate.

Should the DC converter ever fail, a diode circuit within the microphone ensures that both systems will remain operational. The cardioid pattern is automatically chosen. The sensitivity is reduced by 3 dB.

Application Hints

- As XY stereo mic
- As MS stereo mic
- Overall stereo main mic (overhead)
- Announcer's mic for broadcasting, drama, features...

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

NEUMANN.BERLIN

THE MICROPHONE COMPANY

KMR 81/82 i

▶ **Shotgun
Microphones**

www.neumann.com

The KMR 81 and KMR 82 are shotgun microphones with a high directivity that remains within the acceptance angle independent of the frequency.

The advantage is that a sound source, for example an actor on stage, will not change its apparent tonal balance when moving within this area.

Applications

Shotgun microphones are particularly useful in recording situations where a microphone cannot be positioned within the desired distance of the sound source to produce a sufficiently loud signal level.

Typical applications are film and video recordings, where the microphone should not appear in the picture.

The KMR 82 is very often used on stage. The KMR 81 has been specifically designed for electronic news gathering.

Acoustic features

In principle, Neumann shotgun microphones use a combination of a pressure gradient transducer and an interference tube. If the wavelength of the frequency is longer than the tube

length, the microphones work as pressure gradient transducers. At higher frequencies they operate as interference transducers for lateral sound. Off-axis sound sources are picked up with reduced level, but without coloration.

Therefore, the microphones are well suited to record individual instruments of an orchestra. The pickup areas of several shotgun microphones may even overlap as, for example, during recordings on a large stage, without causing any problem.

The KMR 81 and KMR 82 are less sensitive to wind and pop noise when compared to the KM 150 miniature microphone with a similar high directivity. Both shotgun microphones feature extremely low self noise, good impulse response, and high output level.

Polar pattern

KMR 81 and KMR 82 are shotgun microphones with a very directional characteristic.

The microphone capsule is positioned inside a housing tube that is acoustically open but has a high flow resistance.

The directional patterns of the microphones are lobe shaped. The attenuation of lateral sound is practically independent of the frequency.

The KMR 82 has a frequency independent directivity within a pickup angle of 45° for audio signals that determine the tonal balance of the program material. For the KMR 81, this angle is 90°.

Features

- Interference tube microphones with shotgun directional characteristic
- Interference/pressure-gradient transducer
- High lateral and back attenuation
- 90°/45°-recording angle
- Switchable filter or preattenuation features
- Extensive accessories for outdoor use
- Light weight: 145 g/250 g

Filter and attenuation KMR 81 i

The microphone has a 10 dB attenuation switch to prevent the input of the following unit from overloading.

A second switch activates a 200 Hz high-pass filter. Toward the lower frequencies the sensitivity of the microphone is attenuated by approximately 15 dB at 50 Hz. The frequency range above 200 Hz is unaffected.

Filter KMR 82 i

Between 2 kHz and 15 kHz the KMR 82 has a boost to compensate for HF transmission losses in air when recording distant sound sources.

This may overemphasize any sibilance if the microphone is used close-up.

Therefore, a two-position slide switch allows to select the setting that is best for balanced upper frequencies.

The KMR 82 has a high-pass filter to suppress subsonic interference. The cutoff frequency may be raised to 120 Hz (-3 dB) with a built-in two-position slide switch.

Use on location

The shotgun microphones feature very high output capability and a remarkably low self-noise level.

Their low power consumption, light weight, and low sensitivity to wind and handling noise, make them ideal tools for news gathering on location.

Small dimensions, together with a balanced center of gravity, make handling easy without any whiplash effect.

However, when on location and during strong wind conditions, we recommend using an additional wind screen (included as standard accessory). The wind screen is made of polyurethane foam and also serves as soft padding of the microphone in its leather carrying case.

For mobile use a handle and an elastic suspension are available.

BCM 104

► **Broadcast Line**

www.neumann.com

NEUMANN.BERLIN

►► THE MICROPHONE COMPANY

* The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Emotion conveyed with technical perfection. This is the ideal which the Neumann microphones in the Broadcast Line have been designed to fulfill. The fine-tuning to the requirements of professional broadcast studios and the individual, functionally optimized design* ensure that these are microphones of character.

With its large-diaphragm condenser capsule and cardioid directional characteristic, the BCM 104 is ideal for the faithful reproduction of speech and music. This is due, for instance, to the frequency response that is flat up to 3 kHz and then gradually boosted in the higher frequencies. If required, internal switches can be used to compensate for the proximity effect and to reduce the sensitivity by 14 dB. The versatility of the BCM 104 can be seen in its wide range of applications, from news, to round-table discussions, to radio plays, to musical recordings.

Mechanical Features

The microphone headgrille twists off easily for quick cleaning. Neumann offers optional color-coded headgrilles so that, for reasons of hygiene, each announcer can use his or her individual headgrille. In front of the capsule, mounted on a frame holder, a fine gauze serves as a built-in popscreen.

The microphones of the Broadcast Line have an elastic mount against structure-borne noise, that is compatible with standard broadcast-segment microphone arms.

Acoustic Features

The microphone headgrille houses the K 04 large-diaphragm capsule, which has a flat frequency response up to 3 kHz. Higher frequencies have an increased presence up to 2 dB.

Since the above-mentioned microphone characteristics are obtained without the use of resonance effects, the microphone features excellent transient response and transmits all transient phenomena of music and speech without any coloration.

The integrated Pop Screen

A pop screen not only prevents the occurrence of plosive pop noises in vocal recordings, but also efficiently prevents unwanted particles, from respiratory moisture, nicotine, to food remnants, from settling on the diaphragm. The pop screen can be removed for cleaning without the use of tools.

Electrical features

Instead of a transformer to couple the microphone output to the supply voltage, the BCM 104 has an electronic circuit which, like a transformer, provides for good common mode rejection. Interference induced in the balanced modulation line is thus suppressed effectively.

With a very low self-noise of 7 dB(A), and an overload capability extending to 138 dB SPL, the BCM 104 has a dynamic range of 131 dB (A-weighted).

Filter and Preattenuation

The BCM 104 amplifier has a linear operation down to 20 Hz. An active filter efficiently suppresses signals below this frequency. In order to compensate for the proximity effect, an electronic high-pass filter, activated by a switch, is built into the microphone. This filter reduces frequencies below 100 Hz by 12 dB/octave.

A 14-dB preattenuation switch is provided in order to adjust the sensitivity, if necessary, to circuits designed for dynamic microphones. This will increase the self noise level accordingly.

Both switches are located inside the microphone housing, since they will normally be operated only once, when the broadcasting facility is set up.

Mounting

The preferred mode of operation is to suspend the microphones in the Broadcast Line from a standard studio boom arm. A thread adapter to fit different connector threads is included. In order to provide protection from structure-borne noise, both the capsule and the microphone in its mount are elastically suspended.

The optional SG 5 swivel mount allows additional angling of the microphone by ± 90 degrees.

BCM 705

► **Broadcast Line**

www.neumann.com

NEUMANN.BERLIN

► THE MICROPHONE COMPANY

* The design of the microphone is a registered design of the Georg Neumann GmbH in certain countries.

Emotion conveyed with technical perfection. This is the ideal which the Neumann microphones in the Broadcast Line have been designed to fulfill. The fine-tuning to the requirements of professional broadcast studios and the individual, functionally optimized design* ensure that these are microphones of character.

The BCM 705 is Neumann's first dynamic microphone. The housing and headgrille are identical to those of the BCM 104; only the green logo indicates that this is something new from Neumann. The principle of reduction to the essentials can be seen in the dynamic capsule with a hypercardioid directional characteristic, specifically designed for speech reproduction at close range. Multi-level isolation from structure-borne noise ensures operation free of interference, even in a lively studio environment.

Mechanical Features

The microphone headgrille twists off easily for quick cleaning. Neumann offers optional, color-coded headgrilles so that, for reasons of hygiene, each announcer can use his or her individual headgrille.

The microphones of the Broadcast Line have an elastic mount against structure-borne noise, that is compatible with standard broadcast-segment microphone arms.

Acoustic Features

The frequency response has a light treble boost, in the region from 2 kHz to 9 kHz, aiding the speech intelligibility. The bass frequency response is designed to compensate for the overemphasis of the bass caused by the proximity effect.

The integrated Pop Screen

A pop screen not only prevents the occurrence of plosive pop noises in vocal recordings, but also efficiently prevents unwanted particles, from respiratory moisture, nicotine, to food remnants, from settling on the diaphragm.

Mounting

The preferred mode of operation is to suspend the microphones in the Broadcast Line from a standard studio boom arm. A thread adapter to fit different connector threads is included. In order to provide protection from structure-borne noise, both the capsule and the microphone in its mount are elastically suspended.

The optional SG 5 swivel mount allows additional angling of the microphone by ± 90 degrees.

GFM 132

▶ **Boundary Layer
Microphone**

www.neumann.com

The GFM 132 is a boundary layer microphone. Through computer simulation Neumann optimized the design to be free of any comb filter effects due to reflections, typical of other such microphones.

The smooth frequency response for all angles of incidence exhibits a rise in the upper frequency range. This assures that all sound sources, even distant ones, will be recorded with clarity and presence.

Therefore, typical applications are for live recordings, such as in the orchestra pit of opera houses, theaters, and on stage.

The back of the microphone has non-slip pads for its use in a horizontal or inclined position, and holes for wall suspension. It is supplied with a wooden case and a wind screen.

Features

- Boundary layer microphone
- Pressure transducer
- Frequency independent hemispherical directional characteristic
- Identical diffuse- and free-field response
- No angle dependent coloration through patented triangular form
- No comb filter effects
- Insensitive to structure-borne noise

Background

Boundary-layer microphones are generally characterized by the following features:

They have an identical flat frequency response in the diffuse-field and free-field;

They have a hemispherical polar pattern, independent of the frequency;

They have a 6 dB higher output level through pressure doubling at the boundary surface.

Until recently, neither the potential of identical diffuse- and free-field response, nor the ideal hemispherical polar patterns throughout the entire frequency range have been achieved by any known boundary-layer microphone. Circular, square, or rectangular plates were used to mount the acoustic transducer and to provide the "live" sound reflecting surface for pressure doubling at high frequencies.

However, such shapes have disadvantages: The sound pressure level at the position of the transducer depends on the frequency and the incidence angle. The incoming primary sound field is superimposed upon the secondary sound field resulting from diffraction at the edges of the plate. As a result, boundary-layer microphones using circular, square or rectangular shaped plates generate linear distortion, such as comb filter effects, of frequency and polar response.

The Neumann solution

The GFM 132 boundary-layer microphone has a unique, computer generated shape that totally avoids these disadvantages. The path lengths from each edge point to the center of the transducer are distributed evenly for all wavelengths within the frequency range.

This design eliminates any possible linear distortion of frequencies caused at the location of the electro-acoustic transducer by the interaction of the incoming primary sound field with the secondary sound field from diffraction at the edges of the plate.

The operating range of the plate reaches from the lowest frequency causing a pressure doubling in front of the plate to the upper limit of the audible range.

The microphone features a smooth frequency response for all angles of incidence, with a slight rise in amplitude in the upper frequency range. This assures that all sound sources, even distant ones, will be recorded with clarity and presence.

Acoustic features

- The microphone provides high output voltage through pressure doubling at the boundary surface.
- Identical diffuse- and free-field frequency response. Its advantage is that the apparent tonal balance of a moving sound source is independent of the distance and direction.
- The special geometric shape prevents angle-dependent coloration in the vertical and horizontal planes.
- There are no comb filter effects in typical applications, for example on a speaker's desk, as they would occur through reflections, using conventional microphones.
- The hemispherical polar pattern is independent of the frequency, producing a spatial sound with presence and excellent transparency.
- As is common for a pressure transducer, the microphone is insensitive to structure borne noise and air movements.

- The microphone reproduces with great accuracy very low frequencies if the boundary layer is adequately large.
- In surroundings with good acoustics the GFM 132 creates incredibly realistic AB-stereo recordings, taking advantage of delay and intensity differences in the audio signal.

Electrical features

The GFM 132 uses transformerless circuitry and operates on 48 V phantom power. The usual output transformer is replaced by an electronic circuit.

As with traditional transformers, this design ensures good common mode rejection and prevents RF interference that may influence the balanced audio signal. The microphone features high output capability and extremely low self noise. It provides exceptionally clean sound reproduction free of coloration.

Attenuation

The microphone has a 10 dB attenuation switch to prevent the input of the following unit from being overloaded.

The switch is located next to the cable connector at the side of the GFM 132 boundary layer microphone.

Application Hints

- An ideal stereo pair for AB technique
- For round table discussions
- Quick and easy installation for the "fast interview"
- Invisible spot mic for
 - harp,
 - cello,
 - double bass,
 - acoustic guitar
- Excellent bass response when used as main mic for drums

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

TLM 50

► **Pressure
Microphone**

www.neumann.com

Features

- Small diaphragm microphone with omnidirectional pattern
- Successor of the world-wide successful M 50
- Excellent response down to lowest frequencies
- Pressure transducer
- High frequency polar pattern similar to pressure gradient transducer
- Set includes cable and auditorium hanger

The TLM 50 is a studio microphone with an unusual omnidirectional characteristic. The same way as in the legendary M 50, the capsule is mounted flush into the surface of a sphere.

This unique design gives the microphone a smooth rise in frequency response and an increased directivity in the upper frequency range.

There the directional characteristic is almost comparable to a pressure gradient microphone. In the lower audio spectrum it performs more as a pressure transducer with a linear response down to the lowest frequencies.

In 1991 the TLM 50 received the MIX MAGAZINE TEC-Award. It is supplied with a swivel mount cable and an auditorium hanger.

Applications

The design of the TLM 50 is based on the legendary M 50 and has very unique acoustic features. It provides a tool for capturing both direct sound from the instruments and a balanced image of the reverberant environment and is therefore especially suited for stereo recordings with two main microphones.

Acoustic features

The diaphragm of the pressure capsule is 12 mm in diameter and is only 5 μm thick. As a result it has a remarkably fast transient response. The diaphragm is made out of titanium, manufactured by Neumann in a proprietary electroplating process.

The headgrille is acoustically very transparent. Even extreme sound pressure levels do not at all affect the transducer's response.

Of course, the headgrille also protects the microphone capsule from mechanical shock and serves as wind and pop screen.

Electrical features

The letters TLM stand for "transformerless microphone". The usual output transformer is replaced in the TLM 50 by an electronic circuit. As with traditional transformers, this technique ensures good common mode rejection, and prevents RF interference, that may influence the balanced audio signal. The transformerless microphone amplifier provides low self noise, fast transient response, and high output capability.

To protect the capsule from hum pickup through the gauze mesh, it is designed as an "active capsule": The capsule housing contains the impedance converter built as a hybrid module. The resulting audio signal is fed with low impedance to the filter and output stage in the housing.

Filter and attenuation

A -10 dB switch and a high-pass filter for the attenuation of frequencies below 100 Hz are located at the rear of the microphone. In the position LIN, the cutoff frequency is 30 Hz. Its purpose is to protect the following equipment from subsonic interference (for example strong air currents).

The -10 dB function is achieved by reducing the capsule polarizing voltage from 60 V to 23 V. It helps to avoid overloading the following units during very high sound pressure levels.

The switch does not extend the dynamic range of the microphone amplifier, but shifts it upward by 10 dB.

Application Hints

- Its special acoustic properties make this an ideal mic for most classical recordings
- A superb AB stereo pair for perfect balance of direct and reverberant sound
- Decca tree, setup with three microphones
- A highest quality spot (solo) mic

These are just some of the most common applications. We recommend additional experimentation to gain maximum use from this microphone.

Cable suspension

The recommended accessories, such as cables and connectors, provide sufficient stability and therefore allow suspending the TLM 50 eg. from the ceiling of a concert hall with the included MNV 87 auditorium hanger freely from its own cable.

Table Stands, Table Flange

Table Stand MF 2

Small table stand with brass base, very sturdy. It has a black matte finish. The bottom is fitted with a non-slip rubber disk. The stand has a 1/2" threaded stud for mounting the SG 21 bk, for example. The rubber shock mount between the stud and the base serves to suppress structure-borne noise.
Ø 60 mm, Weight 340 g.

MF 2 blk Cat. No. 007266

Table Stand MF 3

The MF 3 is a table stand with iron base, 1.6 kg in weight, 110 mm in diameter. It has a black matte finish. The bottom is fitted with a non-slip rubber disk. The stand comes with a reversible stud and an adapter for 1/2" and 3/8" threads.

Stand extensions STV see page 5.

MF 3 blk Cat. No. 007321

MF-AK Table Stand with Swivel Joint

Small table stand with swivel joint, with 2.4 m cable, connecting directly to the active capsules of the KM 100 system. It is inserted between active capsule and KM 100 output stage. Cable outlets are sideways and on the underside. The MF-AK is fitted with a non-slip rubber disk.
Ø 60 mm, Weight 285 g.

MF-AK blk Cat. No. 008453

Table Flange TF 221 c

Table flange to mount components of the KM 100 system inconspicuously. It can be fastened under a tabletop or vertically to the edge of a stage allowing to hide other attachments, for example the SG 100 swivel mount. A KVF.. capsule extension, when clipped into the SG 100 is the only visible part above the hole in the table. The table flange comes with a connecting rubber piece for acoustic decoupling of the microphone from the mounting surface. 1/2" threaded stud. Flange-Ø 73 mm. 3 mounting holes, Ø 5.2 mm each.

TF 221 c blk Cat. No. 007278

Stands, Floor Stands and Shock Mount

Stand M 210/1

M 210/1 is a floor stand with boom attachment, weight 3.5 kg, nickel-plated. The height is adjustable between 0.9 m and 1.6 m, boom extends to 0.84 m. Stand and boom have a 3/8" threaded stud.

M 210/1 ni Cat. No. 007250

Stand M 214/1

M 214/1 is a folding floor stand, weight 6 kg, heavy duty. The height is adjustable between 1.3 and 2.2 m, when folded 1.2 m. The stand is partly nickel-plated, partly black lacquered. It has a 1/2" threaded stud for mounting microphones or M 212 c boom attachment.

M 214/1 blk Cat. No. 007248

Boom Attachment M 212 c

M 212 c is a boom attachment designed for the floor stand M 214/1. Weight 4.3 kg. Boom extension is adjustable between 1.1 m and 1.8 m. Counterbalanced for heavy microphones; 3/8" threaded stud, 1/2" female thread. The boom is partly nickel-plated, partly black lacquered.

M 212 c blk Cat. No. 007251

Stand M 252

M 252 is a folding floor stand with boom attachment. Weight 3.2 kg. The height is adjustable between 0.61 m and 1.55 m, when folded 0.56 m. The boom attachment extends from 0.46 m to 0.765 m. The floor stand and the boom attachment have a 3/8" threaded stud. Partly nickel-plated, partly black lacquered.

M 252 blk/ni ... Cat. No. 007253

Stands, Floor Stands and Shock Mount

Stand M 255

Folding floor stand, especially designed for adjustments close to the floor comes with a permanent boom attachment. Weight 3.0 kg. The height of the horizontal boom is 0.43 m. The boom attachment extends from 0.85 m to 1.54 m. It has a 3/8" threaded stud. Partly nickel-plated, partly black lacquered.

M 255 blk/ni ... Cat. No. 007249

Floor Stand MF 4

Floor stand with grey cast iron base. The floor stand has a matte black finish and rests on a non-skid rubber disk attached to the bottom. A reversible stud and a reducer for 1/2" and 3/8" threads are also supplied. Weight 2.6 kg, Ø 160 mm.

MF 4 blk Cat. No. 007337

Floor Stand MF 5

Floor stand with gray soft-touch powder coating. It has a non-skid sound-absorbing rubber disk attached to the bottom. The stand connection has a 3/8" thread. Weight 2.7 kg, Ø 250 mm.

MF 5 gr Cat. No. 008489

Vertical Bar MZEF 8060/8120 (Sennheiser)

The MZEF ... vertical bars are screwed onto microphone stands (e.g. MF 4, MF 5). They have a length of 600 or 1200 mm, with 3/8" threads. Ø 12 mm.

MZEF 8060 nx Cat. No. 502318

MZEF 8120 nx Cat. No. 502319

Stand Tube SR 100 with KVF 158

The SR 100 is part of a floor stand designed for the KM 100 system, for example using a KM 140.

For connecting with the KM 100 output stage, a KA 100 cable adapter is necessary.

The stand consists of an MF 4 stand and a guide tube in which an inserted KVF 158 capsule extension (included in the supply schedule) glides and can be locked. The guide tube is 20 mm in diameter and 0.8 m in height. The height of the capsule can be adjusted between 0.95 and 1.45 m.

SR 100 (+ KVF 158) .. blk . Cat. No. 007336

Stand Extensions STV 4/20/40/60

The STV... stand extensions are screwed between microphone stands (for example MF 4, MF 5) and swivel mounts (for example SG 21 bk).

Length 40, 200, 400 or 600 mm.
Ø 19 mm.

Shock Mount Z 26 mt

The Z 26 rubber shock mount is inserted between the stand and the swivel mount to avoid the transmission of structure-borne noise. It has a 1/2" threaded stud and a 5/8"-27 female thread to attach to tripods. Included is a thread adapter for 1/2" and 3/8" studs.

Z 26 mt blk Cat. No. 006207

Goosenecks

Gooseneck SMK 100 KA

The SMK 100 KA for the KM 100 system is used to assemble particularly small table microphones, for example on an MF 2 table stand. The gooseneck is only 8 mm in diameter. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2" and 3/8" stands. The cable is incorporated in the gooseneck and emerges at the rear. It terminates with a ring contact adapter fitting onto the KM 100 output stage. Gooseneck length 160 mm. Cable length 2.5 m.

SMK 100 KA blk Cat. No. 008413

Double Gooseneck SMK 100-2 KA

Gooseneck for directly mounting two active capsules of the KM 100 system, making a particularly small table microphone. Both goosenecks are only 8 mm in diameter. The bottom has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2" and 3/8" stands. The cables incorporated in the goosenecks emerge at the rear. They terminate with a ring contact adapter fitting onto the KM 100 output stage. Gooseneck length 160 mm. Cable length 2.5 m.

SMK 100-2 KA blk Cat. No. 008414

Auditorium Hangers

Auditorium Hanger MNV 21 mt

The auditorium hanger adjusts the tilting angle of a microphone suspended by its own cable. The MNV 21 consists of the tilting clamp, suitable to hold a microphone, and a locking cable strain relief. Suitable for cables with 4–5 mm diameter.

MNV 21 mt blk Cat. No. 006802

Auditorium Hanger MNV 100

The MNV 100 auditorium hanger is used to suspend a detached miniature microphone capsule freely from its interconnecting cable. The assembly can be rotated and tilted to any desired angle. Suitable for cables with 3–3.5 mm diameter.

MNV 100 blk Cat. No. 006811

Auditorium Hanger MNV 87 (mt)

The auditorium hanger consists of a cable suspension and a rotating 1/2" threaded stud, to connect to e. g. swivel mounts. The stud is screwed into the threaded coupling of the swivel mount. Then the microphone can be tilted while it is suspended from its own cable. Suitable for cables with 4–8 mm diameter.

MNV 87 ni Cat. No. 006804
MNV 87 mt blk Cat. No. 006806

Stand Mounts and Miscellaneous Mechanical Adapters

Double Mount DS 100-1

Mount to attach two KVF... capsule extensions of the KM 100 system onto a tripod. Especially suited for holding long KVF... It is easy to arrange the capsule extensions in parallel or facing each other. The double mount has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

DS 100-1 blk Cat. No. 008491

Double Mount DS 120

The DS 120 has a 150 mm long support bar with two movable 1/2" threaded studs. Two microphones in their mounts can be attached. Any space or angle between the microphones is freely adjustable. The DS 120 has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

DS 120 blk Cat. No. 007343

Stand Mount MZGE 8000 (Sennheiser)

Stand mount to attach one KVG ... capsule extension to MZEF ... vertical bars.

MZGE 8000 nx Cat. No. 502324

Stand Mount MZGE 8002 (Sennheiser)

Stand mount to attach two KVG ... capsule extensions to MZEF ... vertical bars.

MZGE 8002 nx Cat. No. 502325

Stand Mount SG 1

The microphone mount of the SG 1 is made of metal. The SG 1 has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 1 blk Cat. No. 008445

Stand Mount SG 5

Swivel mount for microphones. On the microphone side it has a 3/8" male thread, on the stand side a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 5 blk Cat. No. 008529

Stand Mount SG 21 bk

Swivel mount with a plastic clamp for miniature microphones. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 21 bk blk Cat. No. 008613

Stand Mount SG 87

The microphone mount of the SG 87 is made of metal. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 87 blk Cat. No. 008619

Stand Mount SG 89

The microphone mount of the SG 89 is made of metal. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 89 blk Cat. No. 008620

Stand Mount SG 100

Swivel mount to attach capsule extensions KVF ... of the variable KM 100 miniature microphone system to tripods. It has a 5/8"-27 thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 100 blk Cat. No. 006688

Stand Mounts and Miscellaneous Mechanical Adapters

Stand Mount SG 100-1

Mount to attach a KVF.. capsule extensions of the KM 100 system onto a tripod. Especially suited for holding long KVF.. It has a 5/8"-27 thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 100-1 blk Cat. No. 008490

Stand Mount SG 105

Stand clamp for KMS vocalist microphones. The clamp can be swivelled and has a 5/8"-27 thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

SG 105 blk Cat. No. 008460

Stand Mount SG 109

Swivel mount for detached miniature microphone capsules. It has a 3/8" thread.

SG 109 blk Cat. No. 008614

Swivel Joint SG 110 nx

The SG 110 nx swivel mount can be inserted between KK 1... capsules and the KM D output stage. The capsule can then be swiveled and orientated through $\pm 110^\circ$. In combination with an elastic suspension and a table flange, a mechanically decoupled, unobtrusive setup can be realised, e.g. for TV news announcers. Length 60 mm, \varnothing 22 mm.

SG 110 nx nx Cat. No. 008611

Stand Mount SGE 100

Swivel mount for detached miniature microphone capsules. A rubber shock mount suppresses structure-borne noise. The swivel mount has an M 6 thread (6 mm). Attaching the swivel mount to the MF 2 table stand, the SGE 100 replaces the rubber shock mount of the table stand.

SGE 100 blk Cat. No. 006742

Swivel Joint SG-AK

The SG-AK swivel mount can be inserted between active capsules and the output stage of the KM 100 system. The capsule can then be swiveled and orientated through 90° . In combination with an elastic suspension and a table flange, a mechanically decoupled, unobtrusive setup can be realised, e.g. for TV news announcers. Length 45 mm, \varnothing 22 mm.

SG-AK blk Cat. No. 008452

Stereo Mount STH 100

Stereo mount with a swivel mount and two holders, for two detached miniature microphone capsules. Two stereo recording methods are then possible.

One holder enables the microphone setup according to the "ORTF Method": Two detached capsules are snapped into the clamps at the end of the holder. The distance between diaphragms is then 170 mm, with an angle of 110° .

The other pair of holders allows stereo setups according to the "Coincidence Method": Capsules are installed acoustically at one point in space, however, freely adjustable to any angle between 30° and 180° .

The swivel mount has a 5/8"-27 thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

STH 100 blk Cat. No. 007315

Stereo Mount STH 120

The STH 120 stereo mount accepts two detached miniature microphone capsules, parallel and one above the other for MS stereo recordings. It is rotatable and swivelable. The swivel mount has a 5/8"-27 thread, plus a thread adapter to connect to 1/2"- and 3/8" stands.

STH 120 blk Cat. No. 008422

Windscreens Sets for Shotgun Microphones

When microphones are used in outdoor applications, with strong winds and vibrations, WKE... windscreens sets should be used for best performance. The windscreens will attenuate sound only in

the uppermost frequency range. Wind noise attenuation was measured without electrical filtering in a turbulent air stream traveling at 20 km/h, generated by a noiseless wind machine.

Image not
yet available

Windscreen WKE 81 Set

For KMR 81i. The elastic suspension, with pistol grip and boom pole connectors, can be used separately, or mounted inside the windscreen. For high winds the use of the textile cover, or the windjammer fur is recommended. Clips for mic diameters 19-25 mm are included.

Wind noise attenuation (with windjammer) 24 (32) dB approx.
Attenuation at 15 kHz 2 (5) dB approx.
Ø 100 mm, length 450 mm.

WKE 81 Set gr Cat. No. 539381

Image not
yet available

Windscreen WKE 191 Set

For RSM 191. The elastic suspension, with pistol grip and boom pole connectors, can be used separately, or mounted inside the windscreen. For high winds the use of the textile cover, or the windjammer fur is recommended. Clips for mic diameter 30 mm.

Wind noise attenuation (with windjammer) 24 (34) dB approx.
Attenuation at 15 kHz 2 (7) dB approx.
Ø 140 mm, length 390 mm.

WKE 191 Set gr Cat. No. 539383

Image not

Windscreen WKE 82 Set

For KMR 82i. The elastic suspension, with pistol grip and boom pole connectors, can be used separately, or mounted inside the windscreen. For high winds the use of the textile cover, or the windjammer fur is recommended. Clips for mic diameters 19-25 mm are included.

Wind noise attenuation (with windjammer) 25 (33) dB approx.
Attenuation at 15 kHz 3 (9) dB approx.
Ø 100 mm, length 570 mm.

WKE 82 Set gr Cat. No. 539382

Popscreens

Pop screens provide excellent suppression of so-called pop noise, such as "p" or "t". They consist of a round, thin frame covered with black gauze on both sides. A gooseneck of about 30 cm (12") in

length is mounted at the popshield. It will be attached to microphone stands by means of a clamp with a knurled screw.

Popscreen PS 15

The frame is 15 cm in diameter.

PS 15 blk Cat. No. 008472

Popscreen PS 20 a

The frame is 20 cm in diameter.

PS 20 a blk Cat. No. 008488

Foam Windscreens

Close range sounds, wind, and fast movements of the microphone boom, all may cause interfering noises. To avoid these unwanted sounds, windscreen accessories are available. Typically, they are made out of open-cell polyurethane foam. These windscreens do not cause interfering resonances and do not influence the direc-

tional pattern. Only in the upper frequency range is the output level slightly attenuated. The wind noise attenuation was measured without electrical filtering in a turbulent air stream traveling at 20 km/h, generated by a noiseless wind machine.

Windscreen WNS 100

Wind noise attenuation 18 dB.
Attenuation at 15 kHz 2 dB. Ø 45 mm.

Power Supplies and Matrix Amplifier

Battery Supply BS 48 i

The battery unit supplies one microphone with 48 V phantom powering (P48). The maximum supply current is 5 mA.

The audio output is dc-free. Therefore, no transformer is needed when connecting to unbalanced inputs. The cables couple to the BS 48 i through XLR 3 connectors.

Maximum length of operation depends on the type of battery and the current drain of the microphone. A microphone requiring e.g. 2 mA can be operated at least 20 hours with one alkaline battery.

Output voltage	48 ± 1 Vdc
Maximum current output	5 mA
Battery	IEC 6 F 22, 9 V
Weight	270 g (without battery)
H x W x D	37 x 80 x 102 mm

BS 48 i blk Cat. No. 006494

Battery Supply BS 48 i-2

The battery unit supplies one or two microphones with 48 V phantom powering (P48). The maximum current drain is 5 mA for each microphone. The audio outputs are dc-free. Therefore, no transformer is needed to connect to unbalanced inputs. The unit has two XLR 5 connections which can be split to XLR 3 connectors with AC 20 and AC 21 adapter cables.

Maximum length of operation depends on the type of battery and the current drain of the microphone. A microphone requiring e.g. 2 mA can be operated at least 20 hours with one alkaline battery.

Output voltage	48 ± 1 Vdc
Maximum current output	2 x 5 mA
Battery	IEC 6 F 22, 9 V
Weight	310 g (without battery)
H x W x D	37 x 80 x 102 mm

BS 48 i-2 blk Cat. No. 006496

Matrix Amplifier MTX 191 A (for RSM 191 and AK 20/40)

The MTX 191 A matrix amplifier is used for processing the MS microphone signals of the RSM 191 shotgun stereo microphone, or the active capsules AK 20 and AK 40. The level of the side signal is variable, independent of which output mode is selected (MS or XY). It is adjusted through a rotary switch in 3 dB steps from -9 dB to +6 dB, relative to the level of the middle signal. Consequently the pickup angle is varied in steps between 60° and 170°.

Depending on the position of the rotary switch on the front of the matrix amplifier the output provides either an MS- or XY-signal. The XY-signal is obtained from the MS-signal by summation ($X = M + S$) or subtraction ($Y = M - S$). In both modes an electric left-right-inversion is alternatively possible if during the recording the microphone is turned upside-down.

To suppress low frequent interfering noise the matrix amplifier has a switchable high-pass filter at 40(LIN)/80/200 Hz. The power for both matrix amplifier and microphone, is either supplied by a 9 V battery (IEC 6 F 22), or through external 48 V phantom powering.

The RSM 191 is connected with the 7-pin KT 5/KT 6 cables. Two AK... active capsules can be connected with an AC 30 cable. The audio is passed through a XLR 5 M connector. The output signal is DC-free. Use AC ... adapter cables to connect the audio to unbalanced inputs.

Operating voltage	9 V or P48
Battery	IEC 6 F 22, 9 V
Side signal	variable -9 dB...+6 dB in 3 dB steps (pick-up angle 60°...170°)
Output	switchable MS or XY
High-pass filter	40(LIN)/80/200 Hz
Weight	390 g (without battery)
H x W x D	37 x 80 x 145 mm

MTX 191 A blk Cat. No. 007331

Power Supplies and Matrix Amplifier

Power Supply N 149 A (for tube microphone)

The N 149 A power supply generates the necessary operating voltages for one tube microphone. It operates with all mains voltages from 100 V to 240 V, 50 or 60 Hz. Mains power is connected through a standard IEC 320 socket. The microphone connects via an DIN-8 connector. The microphone signal is fed to a XLR 3 M connector. The modulation output is balanced. The N 149 A supplies the bias voltages for the microphone capsule, the filament voltage controlled by a sensor circuit, and a further voltage to generate the plate voltage and other necessary operating voltages within the microphone itself. The unit produces constant current effecting a soft start of the tube. The KT 8 cable between microphone and power supply can be up to 100 m long. Modulation cable lengths up to approx. 300 m are allowed.

The three available versions of the N 149 A just differ in their enclosed mains power cable.

Mains voltage Euro	230V/50 Hz
Mains voltage US	117V/60 Hz
Mains voltage UK	240V/50 Hz
Output voltages	for M 149 Tube
Power plug	Euro/US/UK
H x W x D	90 x 100 x 145 mm
Weight approx.	1.5 kg

N 149 A US blk Cat. No. 008446

N 149 A UK blk Cat. No. 008448

(Remote Control) Power Supply N 248

The N 248 supplies one stereo microphone, or two mono condenser microphones with 48 V phantom power (P48). All connectors are of XLR 3 type. The audio signal outputs are DC-free. The 5 directional patterns of the TLM 170 R can be remote controlled with rotary switches. The remote control operates by varying the nominal phantom voltage of 48 V over a range of ± 3 V (patented). As in standard operation, cable lengths up to 300 m are permissible. Set to P48, all conventional microphones can be used as well. Even mixed operation is possible, with one channel remote controlling a TLM 170 R, while the second output supplies a conventional microphone.

Three versions are available.

Mains voltage Euro	230V/50 Hz
Mains voltage US	117V/60 Hz
Mains voltage UK	240V/50 Hz
DC voltage input	5...15 V
Power consumption	max. 3 VA
DC voltage output	48 V \pm 3 V each
Current output	max. 5 mA each
H x W x D	38 x 143 x 103 mm
Weight	415 g

Connecting Cables

Other cable lengths are available upon request! Cable material without connectors see corresponding section on the following pages. Even if very long (Neumann) cables are used, the electroacoustic

characteristics of the microphone are not affected. Only with cable lengths well over 300 m a high-frequency roll-off is noticeable.

Microphone Cable IC 3 mt

Microphone cable with double twist (double helix) braiding as shield. Ø 5 mm, length 10 m. XLR 3 connectors, matte black.

IC 3 mt (10 m) blk Cat. No. 006543

Microphone Cable IC 7

Microphone cable with double twist (double helix) braiding as shield. Ø 5 mm, length 10 m. XLR 7 connectors. Extends KT 5/KT 6.

IC 7 (10 m) ni Cat. No. 006740

Microphone Cable IC 4 (mt)

Microphone cable with rotatable swivel mount for microphones with a thread, and double twist braiding as shield. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands. Ø 5 mm, length 10 m. XLR 3 connectors.

IC 4 (10 m) ni Cat. No. 006547

IC 4 mt (10m) blk Cat. No. 006557

Microphone Cable KT 5

Cable with double twist (double helix) braiding as shield. Ø 5 mm, length 5 m. DIN 7 F and XLR 7 M connectors.

KT 5 (5 m) blk Cat. No. 006719

Microphone Cable IC 5 (mt)

Microphone cable with double twist (double helix) braiding as shield. Ø 5 mm, length 10 m. XLR 5 connectors.

IC 5 (10 m) ni Cat. No. 006623

IC 5 mt (10 m) blk Cat. No. 006624

Microphone Cable KT 6

Cable with rotatable swivel mount, and double twist braiding as shield. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands. Ø 5 mm, length 10 m. DIN 7 F and XLR 7 M connectors.

KT 6 (10 m) blk Cat. No. 006725

Microphone Cable IC 6 (mt)

Microphone cable with rotatable swivel mount for microphones with a thread, and double twist braiding as shield. It has a 5/8"-27 female thread, plus a thread adapter to connect to 1/2"- and 3/8" stands. Ø 5 mm, length 10 m. XLR 5 connectors.

IC 6 (10 m) ni Cat. No. 006621

IC 6 mt (10 m) blk Cat. No. 006622

Microphone Cable KT 8

Cable with double twist (double helix) braiding as shield. Ø 5 mm, length 10 m. DIN 8 connectors.

KT 8 (10 m) ni Cat. No. 008407

Other cable lengths are available upon request!

Connecting Cables

Microphone Cable LC 2

Extension cable for older KM 100 accessories, with double twist braiding as shield. Extension for LC 3 microphone cable. Ø 3.5 mm, length 10 m. 3-pin Lemo connectors, matte black.

LC 2 (10 m) blk Cat. No. 006690

Microphone Cable LC 4

The LC 4 connects detached capsules KK 1.. with the KM D output stage. Ø 3.5 mm, length 5 or 10 m.

LC 4 (5 m) nx Cat. No. 008606
LC 4 (10 m) nx Cat. No. 008607

Microphone Cable LC 3 KA

The LC 3 KA connects active capsules AK... with the KM 100 output stage. Ø 3.5 mm, length 5 or 10 m.

LC 3 KA (5 m) blk Cat. No. 008408
LC 3 KA (10 m) blk Cat. No. 008409

Adapter Cables

Adapter Cable AC 20

Y-cable with one XLR 5 F connector and two XLR 3 M connectors. It is used to split two-channel signals into two mono channels, when using, for example, the BS 48 i-2 power supply.

AC 20 (1 m) Cat. No. 006595

Adapter Cable AC 22

Adapter cable with XLR 5 F connector and unbalanced 3.5 mm stereo jack. It is used to connect the 5-pin XLR output of the BS 48 i-2 power supply or the MTX 191 A matrix amplifier to units with a 3.5 mm stereo input. It is designed for all microphones of the fet 80/100 series and KM 100 F, excluding the KM 100 and the GFM 132.

AC 22 (0.3 m) Cat. No. 006598

Adapter Cable AC 21

Y-cable with one XLR 5 M connector and two XLR 3 F connectors. It is used to connect two mono microphones to power supplies with 5-pin connectors, when using, for example, BS 48 i-2 power supply.

AC 21 (1 m) Cat. No. 006597

Adapter Cable AC 23

Adapter cable with XLR 5 F connector and unbalanced 3.5 mm stereo jack. It is used to connect 5-pin XLR outputs of the BS 48 i-2 power supplies to units with a 3.5 mm stereojack input. Designed only for the KM 100 output stage and the GFM 132 boundary-layer microphone.

AC 23 (0.3 m) Cat. No. 006599

Other cable lengths are available upon request!

Adapter Cables

Adapter Cable AC 25

Adapter cable with XLR 3 F connector and unbalanced 6.3 mm mono jack. It is used to connect 3-pin XLR outputs of power supplies to units with a 6.3 mm monojack input. Designed for all microphones, excluding KM 100 System and GFM 132.

AC 25 (0.3 m) Cat. No. 006600

Adapter Cable AC 28

Y-cable with XLR 5 F connector and two unbalanced 6.3 mm mono jacks. It is used to connect the XLR 5 output of the BS 48 i-2 power supply to units with 6.3 mm monojack inputs. Designed only for KM 100 System GFM 132.

AC 28 (0.3 m) Cat. No. 006603

Adapter Cable AC 26

Adapter cable with XLR 3 F connector and unbalanced 6.3 mm mono jack. It is used to connect XLR 3 outputs of power supplies to units with a 6.3 mm monojack input. Designed only for KM 100 System and GFM 132.

AC 26 (0.3 m) Cat. No. 006601

Adapter Cable AC 29

Y-cable with XLR 5 F connector and two unbalanced 6.3 mm mono jacks, with blocking condensers. It is used to connect the XLR 5 output of the MTX 191 (MTX 191 A see AC 27) matrix amplifier and KU 100 microphone to units with 6.3 mm monojack inputs.

AC 29 (0.3 m) Cat. No. 006604

Adapter Cable AC 27

Y-cable with XLR 5 F connector and two unbalanced 6.3 mm mono jacks. It is used to connect XLR 5 outputs of the BS 48 i-2 power supply or the MTX 191 A matrix amplifier to units with 6.3 mm monojack inputs. Designed for all microphones, excluding KM 100 System and GFM 132.

AC 27 (0.3 m) Cat. No. 006602

Adapter Cable AC 30

Y-cable, 5 m long, to connect two active capsules, e.g. AK 20 and AK 40 as MS stereo couple directly to the MTX 191(A) matrix amplifier. XY or MS signals are then available at the XLR 5 output connector of the MTX 191 (A). The recording angle is electrically remote controlled. KM 100 output stages are not required. Markings: yellow for channel 1 (cardioid), red for channel 2 (figure-8).

AC 30 (5 m) Cat. No. 008418

Cable Material for General Use

Our cable material has been developed by Neumann and is exclusively produced for Neumann by highly qualified manufacturers. All microphone cables have a counter wound double helix copper

shielding, assuring a particularly high degree of coverage (95%). HF rejection is exceptionally good, flexibility of the cable excellent. All prices on request.

Cable Material K 3 x 0,08

Active Capsules for Miniature Microphone System KM 100

AK... active capsules are part of the variable miniature microphone system. Together with the KM 100 output stage, AK... active cap-

sules form a complete microphone. AK 30 and KM 100, for example, make up the KM 130.

Active Capsule AK 20

AK 20 is a pressure gradient transducer with the figure-8 characteristic, realized with a single diaphragm. The diaphragm diameter is just 16 mm. All sound field components reach the diaphragm directly. This results in identical frequency response curves and output levels at 0° and 180° sound incidence. Corresponding accessories allow combining the AK 20 with other active capsules or microphones to obtain an MS-Stereo setup.

AK 20 blk Cat. No. 071659

Active Capsule AK 30

AK 30 is a diffuse-field equalized pressure transducer with a free-field treble boost (approx. 7 dB at 10 kHz). The frequency response in the diffuse sound field is flat up to 10 kHz.

AK 30 blk Cat. No. 069001

Active Capsule AK 31

AK 31 is a free-field equalized pressure transducer. The sensitivity in the free sound field is flat up to 20 kHz. In the diffuse sound field there is a roll-off above 5 kHz.

AK 31 blk Cat. No. 069002

Active Capsule AK 40

AK 40 is a pressure gradient transducer with cardioid characteristic. The frequency curves are very even and parallel to 0° sound incidence. Sound sources within a pickup angle of $\pm 135^\circ$ are transmitted without coloration.

AK 40 blk Cat. No. 069007

Active Capsule AK 43

The AK 43 is a pressure gradient transducer with wide-angle cardioid characteristic. Attenuation: 4 dB at 90°, 8 dB at 135°, and 11 dB at 180°. The frequency response for sound sources within an angle of $\pm 90^\circ$ (off axis) is parallel up to 12 kHz.

AK 43 blk Cat. No. 069014

Active Capsule AK 45

AK 45 is a pressure gradient transducer with cardioid characteristic just like the AK 40. However, it has an acoustic bass roll-off characteristic in the free field and therefore suppresses interfering LF noise (wind, structure-borne noise). Since proximity effect is a natural feature of pressure gradient microphones, the AK 45 appears to be optimized for a flat frequency response at a recording distance of approximately 15 cm (speech cardioid).

AK 45 blk Cat. No. 069015

Active Capsule AK 50

AK 50 is a pressure gradient transducer with a hypercardioid characteristic. Attenuation of sound incidence from the side or rear is approximately 10 dB. Minimum sensitivity occurs at an angle of about 120°.

AK 50 blk Cat. No. 069016

Capsule Heads for Miniature Microphone System KM D / KM A

KK... capsule heads are part of the variable miniature microphone system. Together with the KM D (nx) or KM A (nx) output stages,

the KK... capsule heads form a complete microphone. KK 184 (nx) + KM D (nx) = KM 184 D (nx) or KK 184 (nx) + KM A (nx) = KM 184 A (nx).

Capsule Head KK 120 (nx)

KK 120 is a pressure gradient transducer with figure-8 characteristic, side-fire, realized with a single diaphragm. The diaphragm diameter is just 16 mm. All sound field components reach the diaphragm directly. This results in identical frequency response curves and output levels at 0° and 180° sound incidence. Corresponding accessories allow combining the KK 120 with other active capsules or microphones to obtain an MS-Stereo setup.

KK 120 ni Cat. No. 008589
KK 120 nx nx Cat. No. 008590

Capsule Head KK 145 (nx)

KK 145 is a pressure gradient transducer with cardioid characteristic just like the KK 184. However, it has an acoustic bass roll-off characteristic in the free field and therefore suppresses interfering LF noise (wind, structure-borne noise). Since proximity effect is a natural feature of pressure gradient microphones, the KK 145 is optimized for a flat frequency response at a recording distance of approximately 15 cm (speech cardioid).

KK 145 ni Cat. No. 008595

Capsule Head KK 131 (nx)

KK 131 is a free-field equalized pressure transducer. The sensitivity in the free sound field is flat up to 20 kHz. In the diffuse sound field there is a roll-off above 5 kHz.

KK 131 ni Cat. No. 008591
KK 131 nx nx Cat. No. 008592

Capsule Head KK 183 (nx)

KK 183 is a diffuse-field equalized pressure transducer with a free-field treble boost (approx. 7 dB at 12 kHz). The frequency response in the diffuse sound field is flat up to 10 kHz.

KK 183 ni Cat. No. 008566
KK 183 nx nx Cat. No. 008567

Capsule Head KK 133 (nx)

KK 133 is a diffuse-field equalized pressure transducer with a free-field treble boost (4–5 dB at 12 kHz). The detachable sound diffraction sphere provides a very smooth treble rise, associated with increasing directivity. The frequency response in the diffuse sound field is flat up to 12 kHz. The capsule is made of titanium.

KK 133 ni Cat. No. *)
KK 133 nx nx Cat. No. *)

Capsule Head KK 184 (nx)

KK 184 is a pressure gradient transducer with cardioid characteristic. The frequency curves are very even and parallel to 0° sound incidence. In typical usage, there is no coloration of sound over a wide pickup angle.

KK 184 ni Cat. No. 008568
KK 184 nx nx Cat. No. 008569

Capsule Head KK 143 (nx)

KK 143 is a pressure gradient transducer with wide-angle cardioid characteristic. Attenuation: 4 dB at 90°, 8 dB at 135°, and 11 dB at 180°. The frequency response for sound sources within an angle of ± 90° (off axis) is parallel up to 12 kHz.

KK 143 ni Cat. No. 008593
KK 143 nx nx Cat. No. 008594

Capsule Head KK 185 (nx)

KK 185 is a pressure gradient transducer with a hypercardioid characteristic. Attenuation of sound incidence from the side or rear is approximately 10 dB. Minimum sensitivity occurs at an angle of about 120°.

KK 185 ni Cat. No. 008570
KK 185 nx nx Cat. No. 008571

*) The KK 133 (nx) capsule head is currently only available as part of the KM 133 D (nx) microphone.

Digital Microphone Interface and Power Supplies

Digital Microphone Interface DMI-2

Equipment that supports the AES42 standard can process the output signals of Solution-D microphones directly. In all other cases, the DMI-2 or DMI-8 digital microphone interface is used. The DMIs convert the AES42 data format supplied by the microphone into an AES/EBU signal.

The Interface is operated via the Neumann RCS remote control software, which is installed on a desktop or laptop computer. The computer is connected to the DMI via a USB port and a USB to RS 485 interface converter. If a large number of microphones is used, several DMIs can be cascaded. In this case, each digital microphone interface can be addressed individually.

In addition to a word clock input and output, the DMIs also have an internal word clock generator. If no master word clock signal (e.g. from a mixing console) is present at the input, the DMI internal word clock is used automatically to synchronize the microphone channels, and the signal is switched to the word clock output.

External commands such as „On Air“ (red light) can be controlled via a 9-pin user port.

2 channels,
Inputs: XLR3F, AES42
Outputs: XLR3M, AES/EBU, 24 bit

Control Bus: RS 485 via RJ 45 jack,
second RJ 45 jack for cascading
purposes (up to 4 DMI devices
today, 16 devices in future),
connection to the computer's
USB port via Neumann USB 485
interface converter (included)

User Port: 9-pin sub-D,
3 functions per channel

Synchronization: AES42 - Mode 2
(PLL system using an external
Word Clock and remote controlling
the VCXO in the microphone,
default mode),
AES42 - Mode 1, (asynchronous,
needs a sample rate converter
(SRC) at the receiver side)

Word clock input: BNC, 75 ohms.
Word clock output: BNC, 75 ohms,
automatically set to the internal
word clock master when no
external word clock received.
Selectable internal sampling rates:
44.1, 48, 88.2, 96, 176.4, 192 kHz.

External Word clock: 44.1, 48, 88.2, 96,
176.4, 192 kHz or AES 11 format.

Indicators: Data Valid (AES42)
and Sync Locked (Mode 2)
for each channel,
Power On and Ext. Word Clock

Power supply: 90-240 V, 50/60 Hz.

Storage of the last microphone settings and
reloading to the microphones after power on
automatically without the need of the
computer/RCS.

DMI-2 EU Cat. No. 008561
DMI-2 UK Cat. No. 008587
DMI-2 US Cat. No. 008588

Digital Microphone Interface and Power Supplies

Digital Microphone Interface DMI-8

Equipment that supports the AES42 standard can process the output signals of Solution-D microphones directly. In all other cases, the DMI-2 or DMI-8 digital microphone interface is used. The DMIs convert the AES42 data format supplied by the microphone into an AES/EBU signal.

The Interface is operated via the Neumann RCS remote control software, which is installed on a desktop or laptop computer. The computer is connected to the DMI via a USB port and a USB to RS 485 interface converter. If a large number of microphones is used, several DMIs can be cascaded. In this case, each digital microphone interface can be addressed individually.

In addition to a word clock input and output, the DMIs also have an internal word clock generator. If no master word clock signal (e.g. from a mixing console) is present at the input, the DMI internal word clock is used automatically to synchronize the microphone channels, and the signal is switched to the word clock output.

External commands such as „On Air“ (red light) can be controlled via a 9-pin user port.

8 channels,
AES42 Inputs: XLR3F (Audio data in accordance with AES/EBU (AES3) data format),
Digital phantom power (DPP),
Remote control data

Outputs: AES/EBU (AES3) data format
(2x SUB-D25, Yamaha® and Tascam® pinout),
ADAT® (1x Toslink, up to 48 kHz),
GN format (1x RJ 45),
Word Clock (AES11), 2x BNC,
CTL Bus (RS 485), 2x RJ 45 ports,
User Port (9-pin SUB-D)

Microphone synchronization: AES42 – Mode 2 (synchronous mode)
Microphone clock control via PLL

DMI-8 synchronization automatically to an external word clock or AES11 signal, if present, otherwise the internal word clock generator is activated

Word clock (or AES11) input BNC,
Vin > 100 mV at 75 ohms
Word clock (or AES11) output BNC,
Vout = Vin (external synchronization)
Vout approx. 1.5 V at 75 ohms (internal word clock generator)

Internal word clock generator: 44.1 / 48 / 88.2 / 96 / 176.4 / 192 kHz

Control Bus: 2 x RJ 45 ports;
connection to computer USB port via the Neumann USB 485 interface converter;
connected in parallel for the purpose of cascading.
RS 485 with additional power-out pin (approx. +11.3 V, max. 500 mA)

User Port: 9-pin SUB-D,
1 switch function per channel (Mute and/or Light 1/ Light 2 selectable)

Control elements: 8x CHANNEL SELECT, GAIN +/-

Indicators: Power, Ext Word Clock, Valid, Level (microphone)

Power supply: 90 V to 240 V, 50/60 Hz.

Storage of the last microphone settings and reloading to the microphones after power on automatically without the need of the computer/RCS.

DMI-8 EU Cat. No. 533130

DMI-8 UK Cat. No. 533132

DMI-8 US Cat. No. 533131

Connection set Cat. No. 533126

(USB cable, RJ 45 patch cable, USB 485 converter)

Digital Microphone Interface and Power Supplies

Connection Kit AES/EBU

The Connection Kits serve to supply power to digital microphones, which are in accordance with the AES42 standard. The microphone audio signal is made available at the Connection Kit output in S/PDIF or AES/EBU format, depending upon the model.

The remote control and synchronization capabilities of the AES42 standard cannot be used with the Connection Kit; they are operable only with the DMI-2 or DMI-8 digital microphone interface.

Connection Kit AES/EBU Cat. No. 008584

Connection Kit S/PDIF

The Connection Kits serve to supply power to digital microphones, which are in accordance with the AES42 standard. The microphone audio signal is made available at the Connection Kit output in S/PDIF or AES/EBU format, depending upon the model.

The remote control and synchronization capabilities of the AES42 standard cannot be used with the Connection Kit; they are operable only with the DMI-2 or DMI-8 digital microphone interface.

Connection Kit S/PDIF Cat. No. 008585

Capsule Extensions for Miniature Microphone System KM 100

Any KVF... capsule extension allows to use the active capsules separated from the output stage without the need for additional cables. The rigid part of the capsule extension is 6.5 mm in diameter,

the flexible gooseneck has a diameter of 8 mm. Special length on request.

Capsule Extension KVF 118 KA

The extended length of the KVF 118 KA is approximately 300 mm. Cable length: 2.2 m.

Mounted on SG 100(-1)/DS 100.

KVF 118 KA blk Cat. No. 008410

Capsule Extension KVFF 148 KA

The extended length of the KVFF 148 KA is approximately 570 mm. It differs from the KVF 118/158 KA by providing a second flexible section of approximately 100 mm at about the middle of the rigid section. Cable length: 1.9 m.

Mounted on SG 100(-1)/DS 100.

KVFF 148 KA blk Cat. No. 008412

Capsule Extension KVF 158 KA

The extended length of the KVF 158 KA is approx. 700 mm. Cable length: 1.8 m.

Mounted on SG 100(-1)/DS 100.

KVF 158 KA blk Cat. No. 008411

Capsule Extensions for Miniature Microphone System KM D / KM A

Any KVG ... capsule extension allows to use the KK 1... capsules separated from the output stage without the need for additional cables. The rigid part of the capsule extension is 8 mm in diameter.

At the capsule end, the swivel can be set through $\pm 110^\circ$. The KVG ... are mounted with MZGE 8000 or 8002 on MZEF ... vertical bars. Special lengths on request.

Capsule Extension KVG 130 nx

The extended length of the KVG 130 nx is approximately 300 mm.

KVG 130 nx nx Cat. No. 008608

Capsule Extension KVG 1120 nx

The extended length of the KVG 1120 nx is approximately 1200 mm.

KVG 1120 nx nx Cat. No. 008610

Capsule Extension KVG 160 nx

The extended length of the KVG 160 nx is approximately 600 mm.

KVG 160 nx nx Cat. No. 008609

Further Accessories for Miniature Microphone System KM 100

Cable Adapter KA 100

The current KM 100 system accessories connect directly to the output stages. For older accessories, ending with a 3-pin LEMO plug, the redesigned KA 100 cable adapter connects these accessories to the KM 100 (F) output stages. Length: 0.5 m.

KA 100 blk Cat. No. 007330

Output Stage KM 100

The KM 100 output stage is part of the variable KM 100 miniature microphone system. Together with an AK ... active capsule it constitutes a complete microphone of the KM 100 system. \varnothing 22 mm, length 63 mm.

KM 100 blk Cat. No. 007395

Further Accessories for Miniature Microphone System KM D / KM A

Output Stage KM A (nx)

The analog KM A (nx) microphone output stage is part of the modular KM A miniature microphone system. Together with a KK 1.. capsule head it constitutes a complete microphone of the KM A system.

Ø 22 mm, length 93 mm.

KM A ni Cat. No. 008634

KM A nx nx Cat. No. 008635

Sound Diffraction Sphere SBK 130 A

The SBK 130 A sound diffraction sphere slips onto the KM 130, KM 131 (A/D) and KM 183 (A/D) pressure microphones. While sounds coming from the front-half space are emphasized by up to 2.5 dB between 2 kHz and 10 kHz, sounds arriving from the rear-half space are attenuated by 2.5 dB max in the range above 5 kHz. Inner Ø 22 mm.

SBK 130 A, 22 mm blk Cat. No. 008612

Output Stage KM D (nx)

The digital KM D (nx) microphone output stage is part of the modular KM D miniature microphone system. Together with a KK 1.. capsule head it constitutes a complete microphone of the KM D system. Preset frequencies 44.1, 48 and 96 kHz, other frequencies on demand.

Ø 22 mm, length 93 mm.

KM D (44.1 kHz) ni Cat. No. 008578

KM D nx (44.1 kHz) .. nx Cat. No. 008581

KM D (48 kHz) ni Cat. No. 008579

KM D nx (48 kHz) nx Cat. No. 008582

KM D (96 kHz) ni Cat. No. 008580

KM D nx (96 kHz) nx Cat. No. 008583

Miscellaneous

Headgrille BCK

Replacement Headgrille with 5 rings of different colors. Additional headgrilles enable each microphone user at the broadcasting facility to use his or her own individual headgrille. The improved hygiene ensures a more comfortable working environment at the studio.

BCK ni Cat. No. 008520

Pistonphone Adapter PA 100

The pistonphone adapter allows to attach a calibration tool for any 1" measuring microphone (for example a Brüel & Kjær 4228 or 4230) to each ear channel stud of the KU 100 dummy head. Each ear system can be calibrated separately.

PA 100 blk Cat. No. 006199
